ALLIANCE

Enabling a secure, connected future

# Table of Contents

# 1. Objective

The objective of this document is to define the test specification of the interoperable eUICC Profile. This specification is based on [SA PP TS].

# 2. Introduction

This specification has the objective of testing if a profile is correctly interpreted and correctly loaded on an eUICC.

This document is agnostic on the format of the eUICC: both soldered (embedded in a device) and non-soldered (stand-alone) eUICCs can be the subject of testing. The test cases are written so that they can be used to test both soldered and non-soldered eUICC formats. The only exceptions are test cases 8.2.4.1 and 8.2.4.2 which can be used only for non-soldered eUICCs.

The elements within the scope of this test specification are described in the following figure:

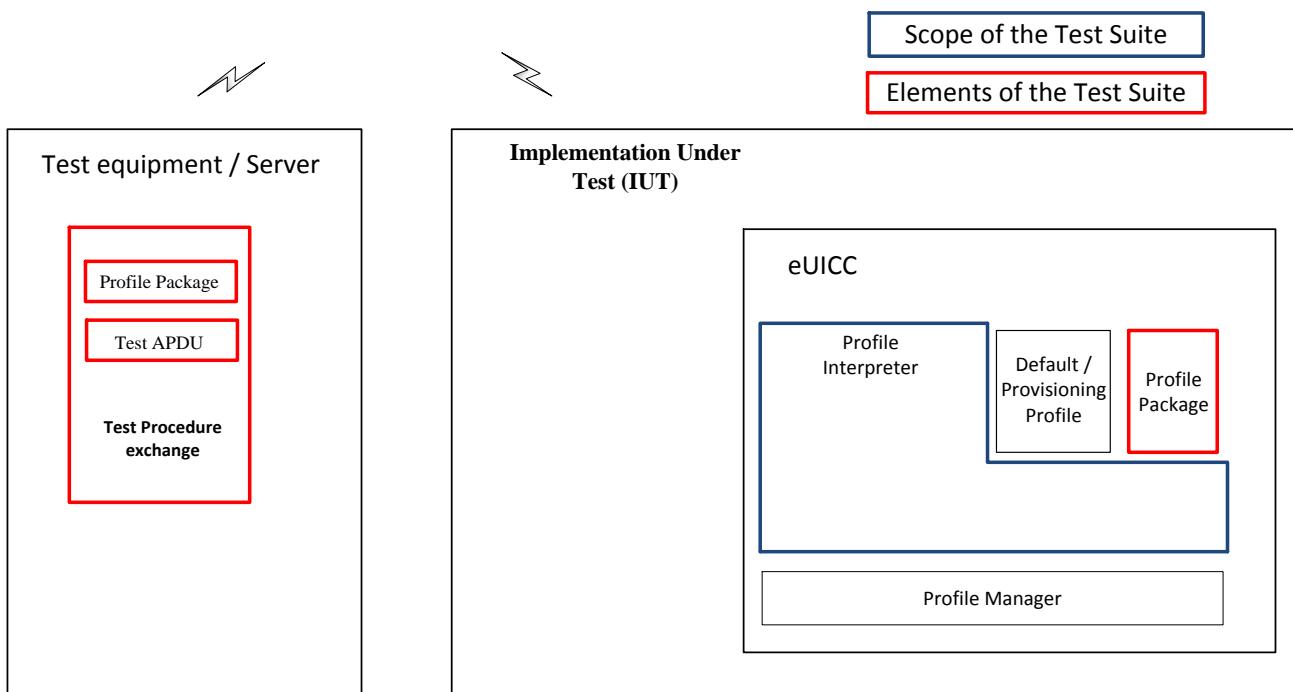

**Figure** 1: **Scope of the testing**

| SQN | Sequence Number |
| SSD | Supplementary Security Domain |
| SW | Status Word |
| SWP | Single Wire Protocol |
| USIM | Universal Subscriber Identity Module |
| T | Test Tool |

# 5. Definitions

| Default Profile | A profile which can be used to connect to the network. |
|-----------------|--------------------------------------------------------|
| embedded UICC | An UICC which is not easily accessible or replaceable, is not intended to be removed or replaced in the terminal, and enables the secure changing of subscriptions. |
| Policy Rules | Defines the atomic action of a policy and the conditions under which it is executed. |
| Profile | Combination of a file structure, data and applications on an eUICC. |
| Profile Creator | External entity in charge of creating the Profile Package based on MNO requirements, protecting the Profile Package from modification and/or content access. |
| Profile Element | A Profile Element is a part of the Profile Package representing one or several features of the Profile encoded using TLV structures based on ASN.1 description. |
| Profile Interpreter | On card entity, which interprets and translates the ASN profile data to objects residing on the eUICC (files, SD-s, applications, keys, etc.). |
| Profile Manager | On-card entity, which is able to load, install, activate and deactivate a profile as per GSMA [GS RPT]. |
| Profile Package | A Personalised Profile using an interoperable description format transmitted to an eUICC in order to load and install a Profile. |
| Provisioning | The downloading and installation of a Profile into an eUICC. |
| Provisioning Profile | The profile which can be used to download an Operational Profile into an eUICC. |
| Remote Provisioning | Provisioning done by the subscription manager on an eUICC outside of their premises, using a secure data link. |

# 6. Test environment

## 6.1 Table of optional features

The supplier of the implementation shall state the support of possible options in Table 1.

| Item | Option | Support | Mnemonic |
|---|---|---|---|
| 1 | Support of USIM. | | O_USIM |
| 2 | Support of ISIM. | | O_ISIM |
| 3 | Support of CSIM. | | O_CSIM |
| 4 | Support of milenage. | | O_MILENAGE |
| 5 | Support of TUAK 128 | | O_TUAK_128 |
| 6 | Support of CAVE. | | O_CAVE |
| 7 | Support of GBA-USIM. | | O_GBA_USIM |
| 8 | Support of GBA-ISIM. | | O_GBA_ISIM |
| 9 | Support of MBMS. | | O_MBMS |
| 10 | Support of EAP. | | O_EAP |
| 11 | Support Contactless. | | O_CONTACTLESS |
| 12 | Support of Java Card. | | O_JAVACARD |
| 13 | Support of Multos. | | O_MULTOS |
| 14 | Support of ETSI TS 102 613 and TS 102 622. Card-emulation Mode. | | O_CARDEMULATION |
| 15 | Support of ETSI TS 102 613 and TS 102 622. Reader Mode. | | O_READER_MODE |
| 16 | Support of GlobalPlatform UICC Configuration. | | O_UICC_CONFIGURATION |
| 17 | VOID | | |
| 18 | VOID | | |
| 19 | For ApplicationLoadPackage, the following parameters are supported: nonVolatileCodeLimitC6 volatileDataLimitC7 nonVolatileDataLimitC8. For volatileDataLimitC7 with value 'FFFF' the eUICC reports error status. | | O_MEMORY_LIMIT |
| 20 | For ApplicationLoadPackage hashValue is supported. | | O_HASHVALUE |
| 21 | The eUICC reports error status and aborts the installation when profile with PE-USIM before PE-MF is loaded. | | O_ERROR_FOR_PE_USIM_BEFORE PE_MF |
| 22 | The eUICC reports error status and aborts the installation when profile with PE-Application before PE-SecurityDomain is loaded. | | O_ERROR_FOR_PE_APPLICATION_BEFORE PE_SECURITYDOMAIN |
| 23 | The eUICC reports error status and aborts the installation when profile with PE-RFM before PE-SecurityDomain is loaded. | | O_ERROR_FOR_PE_RFM_BEFORE PE_SECURITYDOMAIN |
| 24 | The eUICC is able to correctly load profiles with PE-USIM before PE-MF. | | O_SUPPORT_PE_USIM_BEFORE PE_MF |
| 25 | The eUICC is able to correctly load profiles with PE-Application before PE-SecurityDomain. | | O_SUPPORT_PE_APPLICATION_BEFORE PE_SECURITYDOMAIN |
| 26 | The eUICC is able to correctly load profiles with PE-RFM before PE-SecurityDomain. | | O_SUPPORT_PE_RFM_BEFORE PE_SECURITYDOMAIN |
| 27 | Support of PE MF (OID: 2.23.143.1.2.1) creation by template. | | O_ PE_MF_BY_TEMPLATE |
| 28 | Support of PE USIM (OID: 2.23.143.1.2.4) creation by template. | | O_ PE_USIM_BY_TEMPLATE |
| 29 | Support of PE OPT USIM (OID: 2.23.143.1.2.5) creation by template. | | O_ PE_OPT_USIM_BY_TEMPLATE |
| 30 | Support of PE CD (OID: 2.23.143.1.2.2) creation by template. | | O_PE_CD_BY_TEMPLATE |
| 31 | Support of PE TELECOM (OID: 2.23.143.1.2.3) creation by template. | | O_PE_TELECOM_BY_TEMPLATE |
| 32 | Support of file type BER-TLV. | | O_BER_TLV |
| 33 | Support of tag list (5C). | | O_SUPPORT_TAG_5C |
| 34 | Support of tag 'CF' in tag list (5C). | | O_SUPPORT_TAG_CF |
| 35 | Support of file type DF-link. | | O_DF_LINK |

| 36 | Support of PE CSIM (OID: 2.23.143.1.2.10) creation by template. | | O_PE_CSIM_BY_TEMPLATE |
| 37 | Support of PE OPT CSIM (OID: 2.23.143.1.2.11) creation by template. | | O_PE_OPT_CSIM_BY_TEMPLATE |
| 38 | Support of PE ISIM (OID: 2.23.143.1.2.8) creation by template. | | O_PE_ISIM_BY_TEMPLATE |
| 39 | Support of PE OPT ISIM (OID: 2.23.143.1.2.9) creation by template. | | O_PE_OPT_ISIM_BY_TEMPLATE |

**Table 1: Options**

The following dependencies exist between the options:
- At least one of the runtime environments O_JAVACARD and O_MULTOS shall be supported.

## 6.2     Applicability table

Table 2 specifies the applicability of each test case to the IUT.

| Test case | Test case title | Version 2.0 | Version 2.1 |
|---|---|---|---|
| | **Profile Package Elements Definition tests** | | |
| | **Check Profile Format** | | |
| 8.2.1.1 | VOID. | | |
| 8.2.1.2 | Installing profile with PE-USIM before PE-MF, eUICC reports error. | C006 | C006 |
| 8.2.1.3 | Installing profile with PE-Application before PE-SecurityDomain, eUICC reports error. | C007 | C007 |
| 8.2.1.4 | Installing profile with PE-RFM before PE-SecurityDomain, eUICC reports error. | C008 | C008 |
| 8.2.1.5 | Installing profile with PE-USIM before PE-MF. | C011 | C011 |
| | **Check File System** | | |
| 8.2.3.1 | Installing USIM files by generic file management. | C009 | C009 |
| 8.2.3.2 | Installing USIM files by template. | C010 | C009 |
| 8.2.3.3 | Installing USIM files by template with OPT-USIM-2. | C010 | C009 |
| 8.2.3.4 | Installing USIM files by template with BER-TLV files in ServicesList. | NA | C012 |
| 8.2.3.5 | Error when installing PE-USIM when eUICC does not support USIM. | C003 | C003 |
| 8.2.3.6 | Warning when installing USIM files by template with BER-TLV files in a non mandatory PE when eUICC does not support BER-TLV. | NA | C013 |
| 8.2.3.7 | Warning when creating a DF with dfLink in a non mandatory PE when eUICC does not support dfLink. | NA | C015 |
| 8.2.3.8 | Creating a DF with dfLink when eUICC supports dfLink. | C016 | NA |
| 8.2.3.9 | Creating a DF with dfLink when eUICC supports dfLink and dfLink is in ServicesList. | NA | C016 |
| 8.2.3.10 | Installing CSIM files by template. | C017 | C018 |
| 8.2.3.11 | Installing ISIM files by template. | C019 | C020 |
| | **Check NAA(s)** | | |
| 8.2.4.1 | Installing PE-AKAParameters with MILENAGE and sending AUTHENTICATE | C009 | C009 |
| 8.2.4.2 | Installing PE-AKAParameters with TUAK and sending AUTHENTICATE | C021 | C021 |

| Test case | Test case title | Version 2.0 | Version 2.1 |
|---|---|---|---|
| | **Check PIN and PUK codes** | | |
| 8.2.5.1 | Installing PINs in enabled state. | C009 | C009 |
| 8.2.5.2 | Installing PINs in disabled state. | C009 | C009 |
| | **Check Security Domains** | | |
| 8.2.6.1 | Check mandatory elements in PE Security Domain. | C009 | C009 |
| 8.2.6.2 | Check key list in PE Security Domain. | C009 | C009 |
| 8.2.6.3 | Check number of keyComponent objects. | C009 | C009 |
| 8.2.6.4 | Check sdPersoData. | C009 | C009 |
| 8.2.6.5 | Check OTA HTTPs Personalisation. | C009 | C009 |
| | **Check Application loading and installation** | | |
| 8.2.7.1 | Check Application PE and mandatory elements in ApplicationInstance. | C009 | C009 |
| 8.2.7.2 | Check all elements in ApplicationLoadPackage – taking size into account. – PE application is mandatory. | C009 | C009 |
| 8.2.7.3 | Check all elements in ApplicationInstance. | C009 | C009 |
| 8.2.7.4 | Error when loading an Application PEand bad library is provided. | C009 | C009 |
| 8.2.7.5 | Check multiple ApplicationInstance. | C009 | C009 |
| 8.2.7.6 | Check processData. | C009 | C009 |
| 8.2.7.7 | Error when loading Application PE and the lifecycle of SD is not PERSONALISED. | NA | C009 |
| 8.2.7.8 | Check all elements in ApplicationLoadPackage – taking size into account – PE application is not mandatory. | NA | C009 |
| 8.2.7.9 | Check all elements in ApplicationInstance when eUICC supports tag list '5C' with tag 'CF'. | C014 | C014 |
| | **Check RFM parameters** | | |
| 8.2.8.1 | Installing PE-RFM with adfRFMAccess. | C009 | C009 |
| 8.2.8.2 | Installing PE-RFM without adfRFMAccess. | C009 | C009 |
| 8.2.8.3 | Installing profile with two difference PE-RFMs | C009 | C009 |
| | **Check eUICC Response** | | |
| 8.2.11.1 | Check unsupported major version. | M | M |
| 8.2.11.2 | Check unsupported template in Profile Header. | M | M |

**Table 2: Applicability of tests**

| Conditional item | Condition |
|---|---|
| C001 | VOID |
| C002 | VOID |
| C003 | IF O_USIM NOT SUPPORTED THEN M ELSE N/A |
| C004 | IF (O_MEMORY_LIMIT SUPPORTED AND O_USIM SUPPORTED AND O_MILENAGE SUPPORTED) THEN M ELSE N/A |
| C005 | IF (O_HASHVALUE SUPPORTED AND O_USIM SUPPORTED AND O_MILENAGE SUPPORTED) THEN M ELSE N/A |

| C021 | IF (O_USIM SUPPORTED AND O_TUAK_128 SUPPORTED) THEN M ELSE N/A |

**Table 3: Conditional items referenced by Table 2**

## 6.3     Optional features and applicability tables formatting

### 6.3.1          Format of the table of optional features

The columns in Table 1 have the following meaning.

| Column | Meaning |
|---|---|
| Option: | The optional feature supported or not by the implementation. |
| Support: | The support columns are to be filled in by the supplier of the implementation. The following common notations are used for the support column in table 1.<br>• Y or y          supported by the implementation;<br>• N or n          not supported by the implementation;<br>• N/A, or n/a -   no answer required (allowed only if the status is N/A, directly or after evaluation of a conditional status). |
| Mnemonic: | The mnemonic column contains mnemonic identifiers for each item. |

### 6.3.2          Format of the applicability table

The applicability of every test in Table 2 is formally expressed by the use of Boolean expressions defined in the following clause 6.3.3.

The columns in Table 2 have the following meaning:

| Column | Meaning |
|---|---|
| Test case: | The "Test case" column gives a reference to the test case number(s) detailed in the present document. |
| Test case title: | The "Test case title" column gives the title of the test case. |
| Version X: | The "Version X" column indicates which test cases are applicable for the given Technical Specification version. Several different status notifications can be used in this column. They are defined in clause 6.3.3. |

### 6.3.3          Status and Notations

The "Version X" columns show the status of the entries as follows:

The following notations are used for the status column:

M        mandatory – the capability is required to be supported.

O        optional – the capability may be supported or not.

N/A      not applicable – in the given context, it is impossible to use the capability.

X        prohibited (excluded) – there is a requirement not to use this capability in the given context.

O.i      qualified optional – for mutually exclusive or selectable options from a set. "i" is an integer which identifies a unique group of related optional items and the logic of their selection, which is defined immediately following the table.

Ci       conditional – the requirement on the capability ("M", "O", "X" or "N/A") depends on the support of other optional or conditional items. "i" is an integer identifying a unique conditional status expression, which is defined immediately following the table. For nested conditional expressions, the syntax "IF ... THEN (IF ... THEN ... ELSE...) ELSE ..." is to be used to avoid ambiguities.

simalliance

## 6.4      Test environment description

The general architecture for the test environment is:

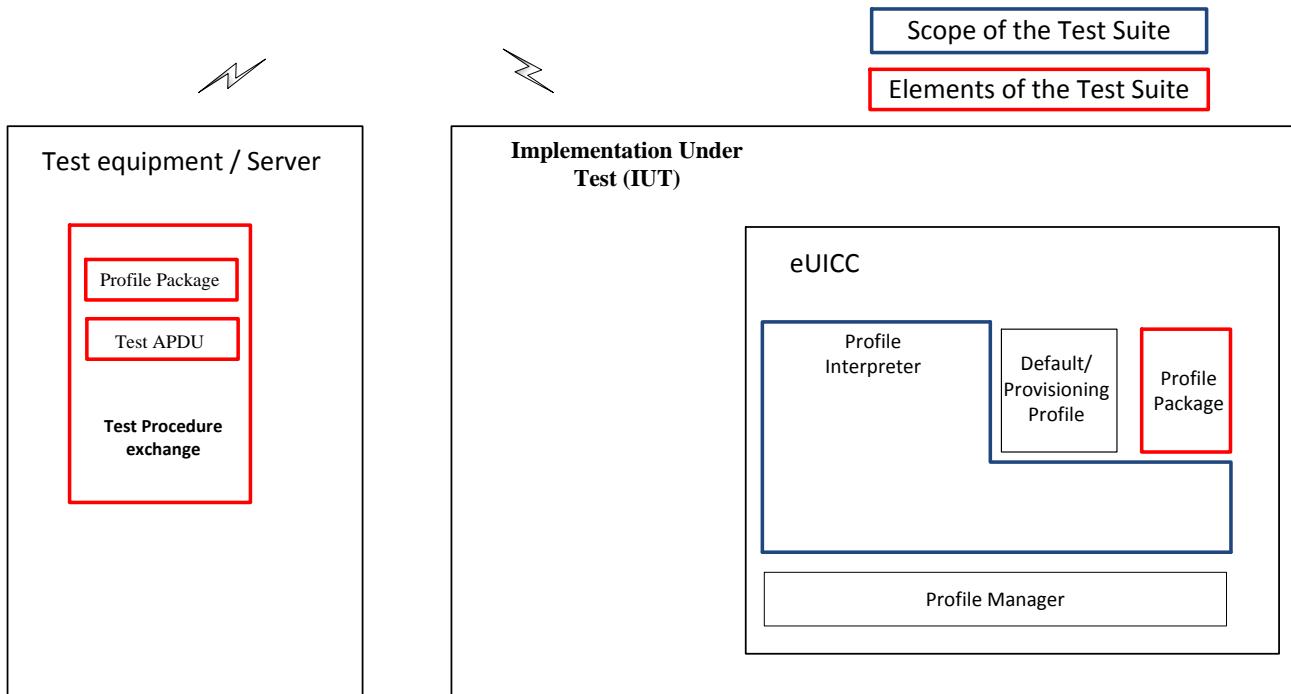

**Figure** 2**: Test environment description**

## 6.5      Test equipment

The test equipment shall meet the following requirements:

- The result of I/O commands shall be presented at the application layer.
- It shall be able to provide results of the tests.
- It shall be able to accept all valid status codes returned.
- It shall send all data specified in the Profile Package.
- It may be able to send and receive commands remotely to/from the IUT, OR
- It may provide a terminal simulation that is connected to the IUT during test procedure execution, unless otherwise specified. With respect to the eUICC, the terminal simulation shall act according to ETSI TS 102 221 [102 221], 3GPP TS 31.101 [UICC] (if this interface is present at the UICC) and 3GPP TS 31.102 [USIM], unless otherwise specified. The terminal simulation may provide the possibility to monitor the eUICC on the ETSI TS 102 221 [102 221] interface if this interface is accessible.

## 6.6      Test execution

The order of the PE-s in the Profile Packages shall be kept as it is defined in the "Test Execution" subchapter of each test case.

After each test case execution, the eUICC shall be put back to its initial state.

### 6.6.1 General Initial Conditions

The General Initial Conditions are a set of general prerequisites for the IUT prior to the execution of testing. For each test procedure described in the present document, the following rules apply to the Initial Conditions:

- Unless otherwise stated, the IUT shall be reset before each test procedure.

#### 6.6.1.1. M2M Architecture

In dependence on the [GS RPAT] the eUICC whether it is removable or not has to reside in an initial state to allow download of a profile. In order to ease the test execution, the creation of the ISD-P is part of the download process mentioned in this document. The following conditions shall be applied:

| Initial state |
|---|
| The ISD-R shall be installed and first personalized by the EUM during eUICC manufacturing.<br>After eUICC manufacturing, the ISD-R shall be in life-cycle state PERSONALIZED as defined in GlobalPlatform Card Specification [GP CS], section 5.3.<br>The ISD-R privileges shall be granted according to Annex C of [GS RPT] |
| The ECASD shall be installed and personalized by the EUM during the eUICC manufacturing with:.<br><br>• PK.CI.ECDSA<br>• SK.ECASD.ECKA<br>• CERT.ECASD.ECKA for eUICC Authentication and key establishment<br>• EUM key set for key renewal<br>• EID<br><br>After eUICC manufacturing, the ECASD shall be in life-cycle state PERSONALIZED as defined in GlobalPlatform Card Specification [GP CS], section 5.3. |
| At least one ISD-P with a Profile shall be installed and first personalized by the EUM during eUICC manufacturing to allow future eUICC connectivity. |
| According to [GS RPT]:<br><br>• The RID of the Executable Load File, the Executable Module and the Application of the ISD- R and the ECASD shall be set to 'A000000559'. .<br>• The ISD- R Executable Load File AID and the ISD-R Executable Module AID can be freely selected by the EUM.<br>• The ISD-R application AID shall be 'A0 00 00 05 59 10 10 FF FF FF FF 89 00 00 01 00'.<br>• The ECASD Executable Load File AID and the ECASD Executable Module AID can be freely selected by the EUM. |
| To enable SCP80, the ISD-R shall be personalized before issuance by the EUM with at least one key set, with a Key Version Number between '01' to '0F' following GlobalPlatform Card Specification UICC Configuration [GP UC]. |
| To enable SCP81, the ISD-R shall be personalized with at least one key set, with a Key Version Number between '40' to '4F' following [GP SE] |
| The following certificates shall be signed and issued by the CI:<br>• Self-signed Root Certificate<br>• EUM Certificates<br>• SM-SR Certificates<br>• SM-DP Certificates |
| The following certificates shall be signed and issued by the EUM:<br>• eUICC Certificates |

| Initial state |
|---|
| The following certificate and key shall be stored in the eUICC:<br>• The eUICC Certificate<br>• The Root public key |
| The eUICC Certificate is part of the EIS (eUICC Information Set) which is stored in the SM-SR and/or at EUM level.<br>This certificate contains:<br>• The PK.ECASD.ECKA used for ElGamal Elliptic Curves key agreement as defined in [GP AE]<br>• The EID |

### 6.6.1.2.        Consumer Device Architecture

The eUICC whether it is removable or not has to reside in an initial state to allow download of a profile. The following conditions shall be applied:

| Initial state |
|---|
| The ISD-R shall be installed and first personalized by the EUM during eUICC manufacturing.<br>After eUICC manufacturing, the ISD-R shall be in life-cycle state PERSONALIZED as defined in GlobalPlatform Card Specification [GP CS], section 5.3.<br>The ISD-R privileges shall be set according to Annex A of [GS SGP22]. |
| The ECASD shall be installed and personalized by the EUM during the eUICC manufacturing.<br><br>• CERT.EUICC.ECDSA (NIST, or Brainpool ,or FRP256V1)<br>• PK.EUICC.ECDSA<br>• PK.CI.ECDSA.<br>• CERT.EUM.ECDSA (NIST, or Brainpool, or FRP256V1)<br>• eUICC Manufacturer's (EUMs) keyset for key/certificate renewal:<br><br>    ○ Renew eUICC's Private Key(s) and Certificate(s)<br>    ○ Renew EUM Certificate(s)<br>    ○ Renew CI public key(s)<br><br>After eUICC manufacturing, the ECASD shall be in life-cycle state PERSONALIZED as defined in GlobalPlatform Card Specification [GP CS], section 5.3. |
| If the eUICC is embedded into a device at least one profile shall be installed and first personalized by the EUM during eUICC manufacturing to allow cellular network connectivity. |
| According to [GS RPT]:<br><br>•   The RID of the Executable Load File, the Executable Module and the Application of the ISD- R and the ECASD shall be set to 'A000000559'.<br>•   The ISD- R Executable Load File AID and the ISD-R Executable Module AID can be freely selected by the EUM.<br>•   The ISD-R application AID shall be 'A0 00 00 05 59 10 10 FF FF FF FF 89 00 00 01 00'.<br>•   The ECASD Executable Load File AID and the ECASD Executable Module AID can be freely selected by the EUM. |
| The following certificates shall be signed and issued by the CI:<br>•   Self-signed Root Certificate<br>•   EUM Certificates<br>•   SM-DP+ Certificates |

### 6.6.2        General Post Conditions

For each test procedure described in the present document, the following rules apply to the Post Conditions:

- After each test procedure in which a Profile Package is installed and enabled the Profile Package shall be disabled according to 6.12, and deleted according to 6.13.

### 6.6.3        SCP80

In order to validate the result of test procedures (e.g. getting the status of Security Domains, reading Files, getting data from applications) certain operations shall be executed using SCP80. The following conditions shall be applied:

- SPI byte 2 shall be set to '21' (SMS_SUBMIT)

## 6.7        Pass criterion

A test shall be considered successful, only if the test procedure was carried out successfully with the IUT respecting all conformance requirements referenced in the test procedure.

## 6.8        VOID

## 6.9        eUICC Initalisation Procedures

This procedure shall be applied by the test tool only when the eUICC under test is in an unsoldered format. When the eUICC under test is embedded in a device, the initialisation procedure is accomplished by the device.

When testing implementations according to [GS RPT] to initialise the communication between T and the eUICC, these commands shall be executed:

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | RESET | |
| 2 | eUICC -> T | ATR | |
| 3 | T → eUICC | [TERMINAL_PROFILE] | |
| 4 | eUICC -> T | Toolkit initialization<br><br>SW='9000' | |

When testing implementations according to [GS SGP22] to initialise the communication between T and the eUICC, these commands shall be executed:

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | RESET | |
| 2 | eUICC -> T | ATR | |
| 3 | T → eUICC | SELECT MF | |

sim alliance

| 4 | eUICC -> T | FCP template is present<br>SW='9000' | |
|---|---|---|---|
| 5 | T → eUICC | [TERMINAL_CAPABILITY] | |
| 6 | eUICC -> T | SW='9000' | |
| 7 | T → eUICC | [TERMINAL_PROFILE] | |
| 8 | eUICC -> T | Toolkit initialization<br>SW='9000' | |

The value of the [TERMINAL_PROFILE] is the same as specified by [GS RPAT] in Annex E1.

The value of the [TERMINAL_CAPABILITY] is: CLA = 80; INS = AA; P1 = 00; P2 = 00; LC = <L>;
Data = A9 05 81 00 83 01 07.

NOTE: It is assumed that some proactive commands may be sent by the eUICC after sending the TERMINAL PROFILE (i.e. SET UP EVENT LIST, POLL INTERVAL, PROVIDE LOCAL INFORMATION…). In this case, T shall send the corresponding FETCH and TERMINAL RESPONSE (successfully performed) commands.

### 6.10    Profile loading
Profile packages shall be loaded using the respective standard procedures supported by the eUICC (e.g. [GS RPT], or [GS SGP22]).

### 6.11    Profile enabling
Profile packages shall be enabled using the respective standard procedures supported by the eUICC (e.g. [GS RPT], or [GS SGP22]).

### 6.12    Profile disabling
Profile packages shall be disabled using the respective standard procedures supported by the eUICC (e.g. [GS RPT], or [GS SGP22]).

### 6.13    Profile deleting
Profile packages shall be deleted using the respective standard procedures supported by the eUICC (e.g. [GS RPT], or [GS SGP22]).

### 6.14    Test PE description

If not stated otherwise the Test PEs in this chapter are compatible for all versions from v2.0 of the SIMalliance eUICC Profile Package: Interoperable Format Technical Specification.
The Test PEs described in this chapter are provided also as ASN1 files and are available for download on the SIMalliance website. These ASN1 files shall be used to create the DER codes.

The parameters below have been chosen to personalise the Profile:

- Profile type: "SIMalliance Profile Package".
- ICCID: '89019990001234567893'.
- IMSI: 234101943787656.
- IMPI: 001010123456789@test.3gpp.com
- IMPU: sip:user@test.3gpp.com
- UIM ID: '0102030405060708'
- MNO-SD AID / TAR value: 'A000000151000000' / 'B20100'.
- RFM application AID / TAR values: 'A00000055910100001' / 'B00000' , 'A00000055910100002' / 'B00002' and 'A00000055910100004' / 'B00140' and 'A00000055910100005' / 'B00150'
- Executable Load File AID for SD: 'A0000001515350'.
- Executable Module AID for SD: 'A000000151535041'.
- SSD AID / TAR: 'A00000055910100102736456616C7565' / '6C7565'.

If not stated otherwise access rules are taken from section "Access Rules Definition" of [SA PP TS].

Two additional Access Rules are used in this specification:

**Table 4: Additional Access Rules**

| File Access Conditions | | | | | | Access Rules | Values |
|---|---|---|---|---|---|---|---|
| Read | Update | Incr. | Act. | Deact. | Delete | | |
| ALWAYS | PIN 1 OR PIN 2 | NEVER | ADM 1 | ADM 1 | ADM 1 | 15 | `8001019000800102A010A40683` `0101950108A406830102950108` `800158A40683010A950108` |
| ALWAYS | PIN 1 AND ADM 1 | NEVER | ADM 1 | ADM 1 | ADM 1 | 16 | `8001019000800102AF10A40683` `0101950108A40683010A950108` `800158A40683010A950108` |

### 6.14.1    Profile Header

Note: When testing implementations according to [GS SGP22] the Profile Headers defined in this Section SHALL not contain the connectivityParameters data object.

#### 6.14.1.1.    Profile-Header-1

Default Profile Header for USIM.

**Profile-Header-1**

```
headerValue ProfileElement ::= header : {
  major-version 2,
  minor-version 1,
  profileType "SIMalliance Profile Package",
  iccid '89019990001234567893'H,
  eUICC-Mandatory-services {
    usim NULL,
    milenage NULL,
    javacard NULL
  },
  eUICC-Mandatory-GFSTEList {
  },
  -- SMS parameters
  connectivityParameters 'A0090607914486994211F0'H
}
```

### 6.14.1.2. Profile-Header-2

It contains the MF ID and CD ID and TELECOM ID and USIM ID in eUICC-Mandatory-GFSTEList.

**Profile-Header-2**

```
headerValue ProfileElement ::= header : {
  major-version 2,
  minor-version 1,
  profileType "SIMalliance Profile Package",
  iccid '89019990001234567893'H,
  eUICC-Mandatory-services {
    usim NULL,
    milenage NULL,
    javacard NULL
  },
  eUICC-Mandatory-GFSTEList {
    -- MF-ID
    {2 23 143 1 2 1},
    -- CD-ID
    {2 23 143 1 2 2 },
    -- TELECOM-ID
    {2 23 143 1 2 3 },
    -- USIM-ID
    {2 23 143 1 2 4},
    -- OPT-USIM-ID
    { 2 23 143 1 2 9 }
  },
  -- SMS parameters
  connectivityParameters 'A00906079144869942111F0'H
}
```

### 6.14.1.3. Profile-Header-3

It contains an unsupported major version.

**Profile-Header-3**

```
headerValue ProfileElement ::= header : {
  major-version 255,
  minor-version 1,
  profileType "SIMalliance Profile Package",
  iccid '89019990001234567893'H,
  eUICC-Mandatory-services {
  },
  eUICC-Mandatory-GFSTEList {
  },
  -- SMS parameters
  connectivityParameters 'A00906079144869942111F0'H
}
```

### 6.14.1.4. Profile-Header-4

It contains an unsupported template.

| Profile-Header-4 |
|---|

```
headerValue ProfileElement ::= header : {
  major-version 2,
  minor-version 1,
  profileType "SIMalliance Profile Package",
  iccid '89019990001234567893'H,
  eUICC-Mandatory-services {
  },
  eUICC-Mandatory-GFSTEList {
      { 2 999 1 }
  },
  -- SMS parameters
  connectivityParameters 'A00906079144486994211F0'H
}
```

### 6.14.1.5. Profile-Header-5

It contains ber-tlv in eUICC-Mandatory-services and MF ID and CD ID and TELECOM ID and USIM ID in eUICC-Mandatory-GFSTEList. It is compatible for versions from v2.1 of [SA PP TS].

| Profile-Header-5 |
|---|

```
headerValue ProfileElement ::= header : {
  major-version 2,
  minor-version 1,
  profileType "SIMalliance Profile Package",
  iccid '89019990001234567893'H,
  eUICC-Mandatory-services {
    usim NULL,
    milenage NULL,
    javacard NULL,
    ber-tlv NULL
  },
  eUICC-Mandatory-GFSTEList {
    { 2 23 143 1 2 1 }, --id-MF
    { 2 23 143 1 2 2 },  --id CD
    { 2 23 143 1 2 3 },  --id TELECOM
    { 2 23 143 1 2 4 }, --id-USIM
    { 2 23 143 1 2 11 } --id-OPTCSIM

  },
  -- SMS parameters
  connectivityParameters 'A00906079144486994211F0'H
}
```

### 6.14.1.6. Profile-Header-6

It contains dfLink in eUICC-Mandatory-services and MF ID, CD ID, TELECOM ID and USIM ID in eUICC-Mandatory-GFSTEList. It is compatible for versions from v2.1 of [SA PP TS]

**Profile-Header-6**

```
headerValue ProfileElement ::= header : {
  major-version 2,
  minor-version 1,
  profileType "SIMalliance Profile Package",
  iccid '89019990001234567893'H,
  eUICC-Mandatory-services {
    usim NULL,
    milenage NULL,
    javacard NULL,
    dfLink NULL
  },
  eUICC-Mandatory-GFSTEList {
    { 2 23 143 1 2 1 }, --id-MF
    { 2 23 143 1 2 2 },  --id CD
    { 2 23 143 1 2 3 },  --id TELECOM
    { 2 23 143 1 2 4 } --id-USIM
  },
  -- SMS parameters
  connectivityParameters 'A0090607914486994211F0'H
}
```

### 6.14.1.7. Profile-Header-7

It contains tuak128 in eUICC-Mandatory-services

**Profile-Header-7**

```
headerValue ProfileElement ::= header : {
  major-version 2,
  minor-version 1,
  profileType "SIMalliance Profile Package",
  iccid '89019990001234567893'H,
  eUICC-Mandatory-services {
    usim NULL,
    tuak128 NULL,
    javacard NULL
  },
  eUICC-Mandatory-GFSTEList {
  },
  -- SMS parameters
  connectivityParameters 'A0090607914486994211F0'H
}
```

It contains csim and cave in eUICC-Mandatory-services and id-CSIM in GFSTEList.

**Profile-Header-8**

```
headerValue ProfileElement ::= header : {
  major-version 2,
  minor-version 1,
  profileType "SIMalliance Profile Package",
  iccid '89019990001234567893'H,
  eUICC-Mandatory-services {
    csim NULL,
    cave NULL,
    javacard NULL
  },
  eUICC-Mandatory-GFSTEList {
    { 2 23 143 1 2 1 }, --id-MF
    { 2 23 143 1 2 10 }, --id-CSIM
    { 2 23 143 1 2 11 } --id-OPTCSIM
  }
  -- SMS parameters
  connectivityParameters 'A0090607914486994211F0'H
}
```

It contains isim in eUICC-Mandatory-services and MF ID and CD ID and TELECOM ID and USIM ID and OPT-USIM ID and ISIM ID and OPT-ISIM ID in eUICC-Mandatory-GFSTEList.

**Profile-Header-9**

```
headerValue ProfileElement ::= header : {
  major-version 2,
  minor-version 1,
  profileType "SIMalliance Profile Package",
  iccid '89019990001234567893'H,
  eUICC-Mandatory-services {
    usim NULL,
    isim NULL,
    milenage NULL,
    javacard NULL
  },
  eUICC-Mandatory-GFSTEList {
    { 2 23 143 1 2 1 }, --id-MF
    { 2 23 143 1 2 2 },  --id CD
    { 2 23 143 1 2 3 },  --id TELECOM
    { 2 23 143 1 2 4 },  --id-USIM
    { 2 23 143 1 2 5 },  --id-OPT-USIM
    { 2 23 143 1 2 8 },  --id-ISIM
    { 2 23 143 1 2 9 }   --id-OPT-ISIM
  },
  -- SMS parameters
  connectivityParameters 'A0090607914486994211F0'H
}
```

     efFileSize '60'H,
     shortEFID ''H
    }
  }
 }
}
```

### 6.14.2.4.2. DF-CUSTOM-by-Generic-File-Management-2

It is a non mandatory custom DF that creates a dfLink file.

**DF-CUSTOM-by-Generic-File-Management-2**

```
linkDF ProfileElement ::= genericFileManagement : {
  gfm-header {
    identification 42
  },

  fileManagementCMD {
  {
    -- no filePath, shall go under MF
    -- Link DF
      createFCP : {
        fileDescriptor '7821'H, -- sharable DF
        fileID '7FA1'H,
        securityAttributesReferenced '0D'H,
        linkPath '7F105F3A'H -- DF Phonebook
    }
  }
 }
}
```

### 6.14.2.4.3 DF-CUSTOM-by-Generic-File-Management-3

It is a mandatory custom DF that creates a dfLink file.

**DF-CUSTOM-by-Generic-File-Management-3**

```
linkDF ProfileElement ::= genericFileManagement : {
  gfm-header {
    mandated NULL,
    identification 43
  },

  fileManagementCMD {
  {
    -- no filePath, shall go under MF
    -- Link DF
      createFCP : {
        fileDescriptor '7821'H, -- sharable DF
        fileID '7FA1'H,
        securityAttributesReferenced '0D'H,
        linkPath '7F11'H -- DF CD
    }
  }
 }
}
```

simalliance

### 6.14.3          PE-PUKCodes

6.14.3.1.          PE-PUKCodes-1

<div style="background-color:#8bc53f; text-align:center; font-weight:bold;">PE-PUKCodes-1</div>

```
pukVal ProfileElement ::= pukCodes : {
  -- PUK PE needs be right after the MF
  puk-Header {
    mandated NULL,
    identification 51
  },
  pukCodes {
    {
      keyReference pukAppl1,
      pukValue '3132333435363738'H,

00000040000000000000008'H,
     authCounterMax '010203'H
  },
     sqnOptions '0E'H     -- Anonymity key used, SQN wrap
around not allowed, SQN Delta and SQN Age Limit are not
used
-- sqnDelta   uses default: '000010000000'H
-- sqnAgeLimit  uses default: '000010000000'H
-- sqnInit:     uses default: all bytes zero
}
```

### 6.14.9.2.    PE-AKAParameters-2

This PE contains parameters for AKA authentication algorithm: TUAK.

| PE-AKAParameters-2 |
|---|

```
akaTUAK ProfileElement ::= akaParameter : {
   aka-header {
      mandated NULL,
      identification 142
      },
   algoConfiguration algoParameter : {
      algorithmID tuak,
      algorithmOptions '00'H,      -- RES 32 bits, MAC 64
bits, CK and IK 128 bits
      key 'abababababababababababababababab'H,
      opc
'bd04d9530e87513c5d837ac2ad954623a8e2330c115305a73eb45d1f 4
0cccbf f 'H,
--    rotationConstants ignored for TUAK,
--    xoringConstants ignored for TUAK,
      authCounterMax '010203'H
   },
      sqnOptions '0E'H     -- Anonymity key used, SQN wrap
around not allowed, SQN Delta and SQN Age Limit are not
used
-- sqnDelta    uses default: '000010000000'H
-- sqnAgeLimit  uses default: '000010000000'H
-- sqnInit:      uses default: all bytes zero
}
```

### 6.14.9.3.    PE-AKAParameters-3

This PE contains AKA parameters mapped to NAA USIM excluding SQN.

| PE-AKAParameters-3 |
|---|

```
usimMappedAKA ProfileElement ::= akaParameter : {
   aka-header {
      mandated NULL,
      identification 143
   },
   algoConfiguration mappingParameter  {
      -- share sqnInit, sqnOptions, sqnDelta, sqnAgeLimit
      mappingOptions  '02'H,
      mappingSource 'A0000000871002FF33FF018900000100'H --
USIM
   }
-- sqnOptions uses default: '02'H,
--   Anonymity key used, SQN wrap around not allowed, SQN
Delta & Age Limit used)
-- sqnDelta    shared
-- sqnAgeLimit shared
-- sqnInit     shared
}
```

### 6.14.9.4. PE-CDMAParameters-1

This PE contains parameters for the CSIM authentication algorithm: CAVE.

**PE-CDMAParameters-1**

```
cdmaParam ProfileElement ::= cdmaParameter : {

```
        }
      }
    }
  }
}
```

### 6.14.11    PE-SecurityDomain (SSD)

#### 6.14.11.1.    PE-SecurityDomain-SSD-1

**PE-SecurityDomain-SSD-1**

```
ssdValue ProfileElement ::= securityDomain : {
  sd-Header {
    mandated NULL,
    identification 171
  },
  instance {
    applicationLoadPackageAID 'A0000001515350'H,
    classAID 'A000000151535041'H,
    instanceAID 'A00000055910100102736456616C7565'H,
    applicationPrivileges '808000'H,
    lifeCycleState '0F'H,
    applicationSpecificParametersC9 '810280008201F0'H,
    applicationParameters {
      uiccToolkitApplicationSpecificParametersField
'010001010000002020112036C756500'H
    }
  },
  keyList {
    {
      keyUsageQualifier '38'H,
      keyAccess '00'H,
      keyIdentifier '01'H,
      keyVersionNumber '01'H,
      keyCompontents {
        {
          keyType '88'H,
          keyData '11223344556677881122334455667788'H
        }
      }
    },
    {
      keyUsageQualifier '34'H,
      -- keyAccess '00'H,
      keyIdentifier '02'H,
      keyVersionNumber '01'H,
      keyCompontents {
        {
          keyType '88'H,
          keyData '11223344556677881122334455667788'H
        }
      }
    },
    {
      keyUsageQualifier 'C8'H,
      keyAccess '00'H,
      keyIdentifier '03'H,
      keyVersionNumber '01'H,
      keyCompontents {
        {
          keyType '88'H,
          keyData '11223344556677881122334455667788'H
        }
      }
    }
  }
}
```

Compared to PE-SecurityDomain-SSD-1 defined in 6.14.11.1 the lifeCycleState is changed to '07'H (SELECTABLE).

### PE-SecurityDomain-SSD-2

```
ssdValue ProfileElement ::= securityDomain : {
  sd-Header {
    mandated NULL,
    identification 172
  },
  instance {
    applicationLoadPackageAID 'A0000001515350'H,

### 6.14.13 PE-RFM

#### 6.14.13.1. PE-RFM-1

The RFM instance is associated to USIM ADF.

| PE-RFM-1 |
| --- |

```
rfmValue ProfileElement ::= rfm : {
  rfm-header {
    mandated NULL,
    identification 181
  },
  instanceAID 'A00000055910100001'H,
  tarList {
    'B00000'H
  },
  minimumSecurityLevel '12'H,
  uiccAccessDomain '00'H,
  uiccAdminAccessDomain '00'H,
  adfRFMAccess {
    adfAID 'A0000000871002FF33FF018900000100'H,
    adfAccessDomain '00'H,
    adfAdminAccessDomain '00'H
  }
}
```

#### 6.14.13.2. PE-RFM-2

The RFM instance is not associated to any ADF.

| PE-RFM-2 |
| --- |

```
rfmValue ProfileElement ::= rfm : {
  rfm-header {
    mandated NULL,
    identification 182
  },
  instanceAID 'A00000055910100002'H,
  tarList {
    'B00002'H
  },
  minimumSecurityLevel '12'H,
  uiccAccessDomain '00'H,
  uiccAdminAccessDomain '00'H
}
```

### 6.14.13.3. PE-RFM-ISIM

The RFM instance is associated to ISIM ADF.

**PE-RFM-ISIM**

```
iSIMrfmValue ProfileElement ::= rfm : {
  rfm-header {
    mandated NULL,
    identification 183
  },
  instanceAID 'A00000055910100003'H,
  tarList {
    'B00140'H
  },
  minimumSecurityLevel '12'H,
  uiccAccessDomain '00'H,
  uiccAdminAccessDomain '00'H,
  adfRFMAccess {
    adfAID 'A0000000871004FF33FF018900000100'H,
    adfAccessDomain '00'H,
    adfAdminAccessDomain '00'H
  }
}
```

### 6.14.13.4. PE-RFM-CSIM

The RFM instance is associated to CSIM ADF.

**PE-RFM-CSIM**

```
cSIMrfmValue ProfileElement ::= rfm : {
  rfm-header {
    mandated NULL,
    identification 184
  },
  instanceAID 'A00000055910100005'H,
  tarList {
    'B00150'H
  },
  minimumSecurityLevel '12'H,
  uiccAccessDomain '00'H,
  uiccAdminAccessDomain '00'H,
  adfRFMAccess {
    adfAID ' A0000003431002FF33FF018900000100'H,
    adfAccessDomain '00'H,
    adfAdminAccessDomain '00'H
  }
}
```

### 6.14.14　PE-End

#### 6.14.14.1.　PE-END-1

| PE-END-1 |
| --- |

```
endValue ProfileElement ::= end : {
  end-header {
    mandated NULL,
    identification 999
  }
}
```

# 7. Profile Package General Structure

## 7.1 Test requirements

The test requirements are extracted from sections 7.2 and 7.3 of "eUICC Profile Package: Interoperable Format Technical Specification" [SA PP TS].

| | |
|---|---|
| RQ7.1.1.1 | Each PE is described and can be processed by the eUICC independently from the others. |
| RQ7.1.1.2 | An identification number shall be associated to every PE. |
| RQ7.1.1.3 | A PE starts with a header containing the following information:<br>• PE identification number.<br>• Optional flag indicating that the support of this PE is mandatory.<br>• PE type.<br>• PE length. |
| RQ7.1.1.4 | If a feature described by a PE which is flagged as mandatory is not supported by the eUICC:<br>• An error is reported to the Profile Creator.<br>• The processing of the Profile Package is cancelled.<br>• And all the PE already processed shall be discarded. |
| RQ7.1.1.5 | If a PE is not flagged as mandatory, and if the eUICC does not support the associated feature, the error is reported but the processing of the Profile Package continues. |
| RQ7.1.1.6 | In order to avoid errors and warnings during the processing of a Profile Package, the Profile Creator may audit the targeted eUICC before building a Profile Package. In that case, all the features described in the Profile Package will be entirely supported by the eUICC. |
| RQ7.1.1.7 | The features that shall be supported by the Profile are also described in the Profile header. In case the eUICC does not support one of the features listed in this Profile header, the eUICC shall immediately return an error code and abort the processing of the Profile. |
| RQ7.1.1.8 | When an eUICC encounters an unknown tag, it shall report either an error or a warning using the code `invalid-parameter` |
| NOTE 1: RQ7.1.1.1, RQ7.1.1.2 and RQ7.1.1.3 are implicitly tested in test cases loading profiles<br>NOTE 2: Testing of RQ7.1.1.4 is FFS.<br>NOTE 3: RQ7.1.1.6 and RQ7.1.1.8  are out of the scope of this specification. | |

## 7.2 Test cases / scenarios

RQ7.1.1.5 is tested in Chapter 8.2.3.

# 8. Profile Package Elements Definition

## 8.1 Test requirements

### 8.1.1 Common types

The test requirements are extracted from section 8.1 of "eUICC Profile Package: Interoperable Format Technical Specification" [SA PP TS].

| RQ8.1.1.1 | The Profile Package shall respect the size constraints 0 to 255 for the basic integer type Uint8. |
|---|---|
| RQ8.1.1.2 | The Profile Package shall respect the size constraints 0 to 32267 for the basic integer type Uint15. |
| RQ8.1.1.3 | The Profile Package shall respect the size constraints 0 to 65535 for the basic integer type Uint16. |
| RQ8.1.1.4 | VOID |
| RQ8.1.1.5 | The Application Identifier (AID) shall be an OCTET STRING with the size of 5 to 16 bytes. |
| RQ8.1.1.6 | The PE Header shall be present at the beginning of all PE-s described in this specification. |
| RQ8.1.1.7 | The PE Header may consist of an optional "mandated" field. The type of the mandated field shall be NULL. |
| RQ8.1.1.8 | If the mandated field is set the support of this PE is mandatory for the installation of this Profile. If the eUICC does not support the following PE, it shall abort the processing of the Profile and return an error to the sender of the Profile. |
| RQ8.1.1.9 | The PE Header shall consist of an "identification" field. The type of the identification field shall be Uint15. |
| RQ8.1.1.10 | The identification field is used to uniquely identify the PE within a Profile. It will be used for error reporting to the sender of the Profile. |
| RQ8.1.1.11 | VOID |
| RQ8.1.1.12 | The ProfileHeader shall be the first element and provided once within a profile download only. |
| RQ8.1.1.13 | VOID |
| RQ8.1.1.13a | The PE MF may be provided once as the first element of the file system creation after the ProfileHeader PE. |
| RQ8.1.1.13b | If PE MF is not used, the MF shall be created as the first element of the file system using the PE Generic File Management. |
| RQ8.1.1.14 | The PE-CD is optional and shall come after the creation of the MF. |
| RQ8.1.1.15 | The PE-TELECOM is optional and shall come after the creation of the MF. |
| RQ8.1.1.16 | The PE-USIM is optional and shall come after the creation of the MF. |
| RQ8.1.1.17 | The PE-ISIM is optional and shall come after the creation of the MF. |
| RQ8.1.1.18 | The PE-CSIM is optional and shall come after the creation of the MF. |
| RQ8.1.1.19 | The PE-OPT-USIM is optional and shall come after the PE-USIM. |
| RQ8.1.1.20 | The PE-GSM-ACCESS is optional and shall come after the PE-USIM. |
| RQ8.1.1.21 | The PE-PHONENOOK is optional and shall come after the PE-USIM. |
| RQ8.1.1.22 | The PE-OPT-ISIM is optional and shall come after the PE-ISIM. |
| RQ8.1.1.23 | The PE-OPT-CSIM is optional and shall come after the PE-CSIM. |
| RQ8.1.1.24 | Dependencies within the file system creation need to be considered. |
| RQ8.1.1.25 | PE-PINCodes shall be created in the context according to their scope. |
| RQ8.1.1.26 | Global PINs (Application PINs according to ETSI TS 102 221) shall be provided once in the context of the creation of the MF of the UICC. |
| RQ8.1.1.26b | Local PINs may be provided once in the context of the creation of a DF or ADF. |
| RQ8.1.1.27 | PE-PINCodes shall only be provided once within each DF (ADF). |
| RQ8.1.1.28 | VOID |
| RQ8.1.1.28a | If PE-AKAParameters is provided, it shall be present in the context of the creation of a NAA filesystem. |
| RQ8.1.1.29 | VOID |
| RQ8.1.1.29a | PE-AKAParameters may be provided once or several times per NAA. If several sets of parameters are provided for one NAA, the set of parameters used by this NAA is not defined. |
| RQ8.1.1.30 | PE-AKAParameters is not allowed in the context of MF. |
| RQ8.1.1.31 | PE-AKAParameters is not allowed in the context of SDs. |
| RQ8.1.1.32 | PE-AKAParameters is not allowed in the context of applications. |
| RQ8.1.1.33 | VOID |
| RQ8.1.1.33a | PE-PUKCodes may only be provided once within the context of the UICC file system (MF). If PE-PUKCodes is not present in the Profile Package then no PUK codes are defined. |
| RQ8.1.1.34 | PE-PUKCodes shall include all PUK codes for the complete profile. |
| RQ8.1.1.35 | PE-SecurityDomain is optional and shall be provided after the creation of the file system, NAA parameters and PIN/PUK configuration. |
| RQ8.1.1.36 | PE-Application is optional and should be provided after the creation of the SDs. Note: This REQ is applicable up to SA PP TS v2.0 |
| RQ8.1.1.36b | PE-Application is optional and shall be provided after the creation of the SDs. Note: This REQ is applicable from SA PP TS v2.1 onwards. |
| RQ8.1.1.37 | PE-RFM is optional. It shall be provided after the creation of the SDs the RFM parameters shall be assigned to. |
| RQ8.1.1.38 | PE-NonStandard is optional and in general may be provided in any position after the profile header. Further restrictions depend on the respective application. |
| RQ8.1.1.39 | PE-End shall be provided once at the end of the Profile Package. |
| NOTE 1: RQ8.1.1.10 and RQ8.1.1.38 are not testable. | |
| NOTE 2: VOID | |
| NOTE 3: Requirements RQ8.1.1.1, RQ8.1.1.2, RQ8.1.1.3 and RQ8.1.1.5 are implicitly tested in test cases loading | |

profiles.
NOTE 4: VOID
NOTE 5: VOID
NOTE 6: Testing of RQ8.1.1.30, RQ8.1.1.31 and RQ8.1.1.32 is FFS (not nominal tests).
NOTE 7: RQ8.1.1.35 is implicitly tested every time a PE-SecurityDomain is used in test cases.
NOTE 8: Testing of RQ8.1.1.20, RQ8.1.1.21 and RQ8.1.1.24 is FFS.

### 8.1.2 Profile header

The test requirements are extracted from section 8.2 of "eUICC Profile Package: Interoperable Format Technical Specification" [SA PP TS].

| RQ8.1.2.1 | The ProfileHeader PE shall be used once and shall be the first PE of the Profile Package. |
|---|---|
| RQ8.1.2.2 | The ServiceList type is used to indicate the services that shall be supported by the eUICC for the installation of a Profile. The type of the fields in the ServiceList shall be NULL. |
| RQ8.1.2.3 | The following list gives the features that the eUICC shall support in order to provide the associated service. |

| Service | Feature provided by the eUICC |
|---|---|
| contactless | support the SWP and HCI interfaces as well as the associated APIs. |
| usim | the USIM application as defined by 3GPP [USIM]. |
| isim | the ISIM application as defined by 3GPP [ISIM]. |
| csim | the CSIM application as defined by 3GPP2 [CSIM]. |
| milenage | the milenage AKA authentication algorithm as defined by 3GPP [MILENAGE]. |
| tuak128 | the TUAK AKA authentication algorithm with 128 bit key length as defined by 3GPP [TUAK]. |
| tuak256 | the TUAK AKA authentication algorithm with 256 bit key length as defined by 3GPP [TUAK]. |
| cave | the CAVE authentication algorithm as defined by TIA [CAVE]. |
| gba-usim | support of GBA authentication context in the USIM application. |
| gba-isim | support of GBA authentication context in the ISIM application. |
| mbms | support of the MBMS authentication context in the USIM application. |
| eap | support of the UICC EAP client. |
| javacard | support of the Java Card TM runtime environment. |
| multos | support of the Multos TM runtime environment. |
| multiple-usim | support of multiple USIM instances – requires "usim" to be present in the list. |
| multiple-isim | support of multiple ISIM instances – requires "isim" to be present in the list. |
| multiple-csim | support of multiple CSIM instances – requires "csim" to be present in the list. |
| usim-test-algorithm | support of Test USIM Parameters for authentication test algorithm as defined by 3GPP [3GTEST]. Note: This is applicable from SA PP TS v2.1 onwards. |
| ber-tlv | support of the BER-TLV Elementary File type. Note: This is applicable from SA PP TS v2.1 onwards. |
| dfLink | support of DF Link feature. Note: This is applicable from SA PP TS v2.1 onwards. |

| RQ8.1.2.3b | When a service is present in the sequence and not supported or not known by the eUICC the installation of the Profile Package shall be aborted |
|---|---|
| RQ8.1.2.4 | The ProfileHeader shall contain the "major-version". The type of the major-version shall be Uint8. |
| RQ8.1.2.5 | When receiving the ProfileHeader, the eUICC shall check the major-version. If the version indicated by the Profile is not supported by the eUICC (e.g. if it is an earlier or an older version), the eUICC shall return an error "unsupported-profile-version" and stop the processing of the Profile. |
| RQ8.1.2.6 | The ProfileHeader shall contain the "minor-version". The type of the minor-version shall be Uint8. |
| RQ8.1.2.7 | The minor-version is only informative. It may indicate that the Profile contains elements that the eUICC will not be able to process if it supports an older version of the specification. In that case, these elements shall be ignored by the eUICC unless they are marked as mandatory in the PE header. |
| RQ8.1.2.8 | The ProfileHeader may contain the "profileType". The type of the profileType shall be UTF8String. The "profileType" is a free optional text indicating for example, the name of the Profile issuer and the type of Profile. |
| RQ8.1.2.9 | The ProfileHeader shall contain the "iccid". The type of iccid shall be OCTET STRING (SIZE (10)). |
| RQ8.1.2.9a | The "iccid" shall be be encoded non-swapped as per ITU E.118 representation and padded with 'F' if less digits are used (Example:8947010000123456784F) (see NOTE 4). |
| RQ8.1.2.10 | The ProfileHeader may contain the "pol". The type of the pol shall be OCTET STRING. The pol contains the policy rules within a Profile. |
| RQ8.1.2.11 | If pol is not supplied in the Profile Package, its value shall be set to all 0 in the eUICC. |
| RQ8.1.2.12 | The ProfileHeader shall contain the "eUICC-Mandatory-services". The type of the eUICC-Mandatory-services shall be ServiceList. |
| RQ8.1.2.13 | The ProfileHeader shall contain the "eUICC-Mandatory-GFSTEList". |
| RQ8.1.2.14 | The "eUICC-Mandatory-GFSTEList" contains a list of OIDs identifying file system templates which |

| | |
|---|---|
| | shall be supported by the eUICC in order for the Profile to be correctly installed on the eUICC. |
| RQ8.1.2.15 | This list may contain the OIDs associated to the file system template defined in "ANNEX A (Normative): File Structure Templates Definition" of this specification. |
| RQ8.1.2.16 | The ProfileHeader may contain the "connectivityParameters". The "connectivityParameters" contains the connectivity parameters as defined in GSMA in [GS RPT], in table 52, not including '3A07' DGI. |
| RQ8.1.2.17 | When the Profile Package contains BER-TLV files, or DF links in a PE which is not mandatory and without indication in the ServicesList that these features shall be supported and the eUICC receiving this Profile Package does not support one of these features, the eUICC shall send a status code set to "feature-not-supported" without any "additional-information" and the installation shall continue without creating the BER-TLV file or the DF link. Note: This REQ is applicable from SA PP TS v2.1 onwards. |
| RQ8.1.2.18 | When the Profile Package contains BER-TLV files, or DF links in a PE which is mandatory and without indication in the ServicesList that these features shall be supported and the eUICC receiving this Profile Package does not support one of these features, the eUICC shall send a status code set to "feature-not-supported" without any "additional-information" and the installation of the Profile shall be aborted. Note: This REQ is applicable from SA PP TS v2.1 onwards. |
| RQ8.1.2.19 | If a template OID present in the list is not supported by the eUICC the installation of the Profile Package shall be aborted. Note: This REQ is applicable from SA PP TS v2.1 onwards. |
| NOTE 1: RQ8.1.2.7 is FFS. | |
| NOTE 2: RQ8.1.2.10 and RQ8.1.2.11 are not testable (there is no interoperable command to read the value). | |
| NOTE 3: RQ8.1.2.13 is implicitly tested everytime ProfileHeader is used. | |
| NOTE 4: REQ8.1.2.9a and RQ8.1.2.16 are out of scope of this specification. | |

### 8.1.3 File system

The test requirements are extracted from section 8.3 of "eUICC Profile Package: Interoperable Format Technical Specification" [SA PP TS].

| RQ8.1.3.1 | Templates need to be created according to the specified settings. |
|---|---|
| RQ8.1.3.2 | Templates can be sent in any order considering the dependencies (e.g. some templates require that a NAA has already been created). |
| RQ8.1.3.3 | Parameters which alter the default given in a template needs to result in the desired configuration; e.g. change of file size, access rule reference. |
| RQ8.1.3.4 | If a file within a template is specified as 'do not create' it must not be available within the created file system. |
| RQ8.1.3.5 | It shall be possible to mix templates with Generic FileSystem Commands. |
| RQ8.1.3.6 | It shall be possible to create a complete profile by Generic FileSystem Commands without use of any templates. |
| RQ8.1.3.7 | Using a template marked as mandated but which is not supported by the eUICC shall lead to an error. |
| RQ8.1.3.8 | The eUICC shall support any template it claims to support. |
| RQ8.1.3.9 | It may be possible to create multiple instances of the following templates:<br>- USIM<br>- ISIM<br>- CSIM<br>- EAP-AKA |
| RQ8.1.3.10 | Templates shall always be created within the current context. E.g. the optional USIM EFs template shall be created in the currently selected application. |
| RQ8.1.3.11 | The eUICC shall be able to create multiple instances of a file from a template by following the process described in figure 2 of [SA PP TS]. |
| RQ8.1.3.12 | It shall not be possible to create two files with the same file path irrespective of whether templates or a generic file system is used. |
| RQ8.1.3.13 | VOID |
| RQ8.1.3.14 | The eUICC shall be able to handle the "template modification rules" described within the specification. |
| RQ8.1.3.15 | File content provided within the profile package shall be applied to the created file. |
| RQ8.1.3.16 | Within an optional template, files shall only be created if the respective TLV is explicitly included in the profile package. |
| RQ8.1.3.17 | For mandatory file templates all files shall be created unless they are explicitly marked as "do not create". |
| RQ8.1.3.18 | For all files which are not fully defined in the template specification (open parameters like size) the respective parameters shall be included in the profile package. |
| RQ8.1.3.19 | FCP of files which have been created may include proprietary information. These parameters shall be ignored when checking the settings of files which have been created. |
| RQ8.1.3.20 | VOID |
| RQ8.1.3.20a | The access conditions which have been configured shall apply for the respective files; e.g.:<br>Read Never implies that the file is not readable even if other PINs are verified;<br>in case PIN1 is specified for read it shall only be possible to read the file if PIN1 has been verified. |
| RQ8.1.3.21 | The eUICC shall support access rule conditions according to the UICC specification ETSI TS 102 221 [102 221]; also supporting AND/OR conditions like PIN1 \|\| ADM1. |
| RQ8.1.3.22 | The eUICC shall apply all provided FCP parameters according to ETSI TS 102 221 [102 221]. |
| NOTE 1: RQ8.1.3.1, RQ8.1.3.18 and RQ8.1.3.19 are out of scope of this specification.<br>NOTE 2: Testing of RQ8.1.3.2, RQ8.1.3.7, RQ8.1.3.9, RQ8.1.3.12 and RQ8.1.3.20a is FFS.<br>NOTE 3: RQ8.1.3.8 and RQ8.1.3.15 are implicitly tested in all test cases. ||

### 8.1.4 NAA(s)

The test requirements are extracted from section 8.4 of "eUICC Profile Package: Interoperable Format Technical Specification" [SA PP TS].

sim alliance

| RQ8.1.4.1 | The PE-AKAParameters shall be tested with the USIM, ISIM and CSIM NAA. |
|---|---|
| RQ8.1.4.2 | PE-AKAParameters shall be tested using both options: milenage and TUAK. |
| RQ8.1.4.2b | PE-AKAParameters shall be tested using option usim-test-algorithm. Note: This REQ is applicable from SA PP TS v2.1 onwards |
| RQ8.1.4.3 | For milenage PE-AKAParameters shall be tested with the following parameters:<br>key: 16 byte length<br>opc: 16 byte length<br>RES Length Options:  64bits<br>MAC-A, MAC-C Size: does not apply. To be set to 0 (64 bit)<br>CK and IK size: 128 bits<br>Rotation constants shall have a length of 5 bytes<br>xoringConstants shall have a length of 80 bytes. |
| RQ8.1.4.3b | For TUAK, PE-AKAParameters shall be tested with the following parameters:<br>key: 16 byte length, 32 byte length<br>opc: 32 byte length<br>RES Length Options: 32bits, 64bits, 128bits<br>MAC-A, MAC-S size: 64bits, 128bits. 256bits<br>CK, IK size: 128bits, 256bits |
| RQ8.1.4.3c | For usim-test-algorithm, PE-AKAParameters shall be tested with the following parameters:<br>Key: 16 byte length. Note: This REQ is applicable from SA PP TS v2.1 onwards |
| RQ8.1.4.4 | For testing milenage the test vectors from 3GPP [MILENAGE] shall be used: PE-AKAParameters shall be initialised with the respective settings. |
| RQ8.1.4.5 | For testing TUAK the test vectors from 3GPP [TUAK] shall be used: PE-AKAParameters shall be initialised with the respective settings. |
| RQ8.1.4.6 | Using Authenticate within USIM NAA in 2G Compatibility mode shall only work if service 38 within the UST is enabled. |
| RQ8.1.4.7 | Authenticate command shall only work if respective Application PIN for the NAA has been verified (e.g. PIN1). |
| RQ8.1.4.8 | Sharing network credentials via the mapping function shall be tested between USIM NAAs, ISIM NAAs and USIM/ISIM. Same algorithmID, algorithmOptions, key, (T)opc, rotationConstants, xoringConstants and authCounterMax for both NAAs is to be anticipated. The following mapping permutations shall be tested:<br>- -Share sqnInit, sqnOptions, sqnDelta, sqnAgeLimit.<br>- -Share sqnOptions, sqnDelta, sqnAgeLimit. |
| RQ8.1.4.8b | The following mapping permutation for the mappingOptions data element shall be tested:<br>- Share sqnOptions, sqnDelta, sgnAgeLimit and SQN array<br>Note: This REQ is applicable from SA PP TS v2.1 onwards |
| RQ8.1.4.9 | DEFAULT values shall be verified by the relevant test to ensure that they are set correctly. |
| RQ8.1.4.10 | It shall be tested if the DEFAULT values can be overwritten by the profile package; it shall also be checked that the DEFAULT values can be provided as well. |
| RQ8.1.4.11 | Values for rotationConstants and xoringConstants shall only be applied in case milenage is used,otherwise ignored. |
| RQ8.1.4.11b | Value for numberOfKeccak shall only be applied in case TUAK is used, otherwise ignored.<br>Note: This REQ is applicable from SA PP TS v2.1 onwards |
| RQ8.1.4.12 | SQN handling shall be tested with the available options:<br>- Authentication shall not work for blocked SQN when the wrap around option deactivated.<br>- If SQN value has reached the maximum value 07FFFFFFFFFF authentication shall still work (by disabled SQN verification) if the wrap around option is activated.<br>- If incoming SQN is out of range (depends on delta and age limit) the eUICC shall indicate the need for resynchronization – provided the authentication vector passes authentication.<br>- Authentication shall work if SQN is within the desired range (considering Delta and Age limit). |
| RQ8.1.4.13 | If a value is provided for authCounterMax it shall be tested. It defines the accumulated number of Authenticate Commands for all the NAA-s which share the counter over the complete life time of the Profile (independent from resets, profile de-/activation). It shall be provided once in a Profile Package. Once the actual number of Authenticate commands reaches the defined value the command should fail and return '6F00' as the respective error code. |
| RQ8.1.4.14 | The eUICC shall support the presence of a single PE-AKAParameters object per NAA. |
| RQ8.1.4.15 | PE-CSIMParameters may be provided in the context of ADF_CSIM |
| RQ8.1.4.16 | PE-CSIMParameters shall contain an authenticationKey of type OCTET STRING with a size of 8. |
| RQ8.1.4.17 | PE-CSIMParameters may contain an ssd of type OCTET STRING with a size of 16 |
| RQ8.1.4.18 | PE-CSIMParameters may contain a hrpdAccessAuthenticationData of type OCTET STRING with a size of |

| | 9 to 32 bytes |
|---|---|
| RQ8.1.4.19 | PE-CSIMParameters may contain a simpleIPAuthenticationData of type OCTET STRING with a size of 10 to 483 bytes |
| RQ8.1.4.20 | PE-CSIMParameters may contain a mobileIPAuthenticationData of type OCTET STRING with a size of 19 to 957 bytes |
| NOTE : Testing of RQ8.1.4.2b, RQ8.1.4.6 - RQ8.1.4.13 and RQ8.1.4.15- RQ8.1.4.20 is FFS . | |

### 8.1.5 PIN and PUK codes

The test requirements are extracted from section 8.5 of "eUICC Profile Package: Interoperable Format Technical Specification" [SA PP TS].

| | |
|---|---|
| RQ8.1.5.1 | Global PINs created by the PE-PINCodes shall be valid within the complete FileSystem. |
| RQ8.1.5.2 | Local PINs shall only be valid within the context (DF/ADF and sub DFs) where they are defined. |
| RQ8.1.5.3 | VOID |
| RQ8.1.5.4 | Local PINs shared shall share remaining attempts in all contexts where they are valid. |
| RQ8.1.5.5 | It shall be possible to create Global PINs in the context of the MF. E.g. after creation of the MF or also after selection of the MF using Generic File System. |
| RQ8.1.5.6 | VOID |
| RQ8.1.5.7 | It shall be possible to share one PUK for multiple PIN values. |
| RQ8.1.5.8 | Blocked PINs cannot be verified via I/O, but applets with the respective access rights may execute the authorised commands (update, read, create, delete etc). |
| RQ8.1.5.9 | Within the FCP of the ADF and the MF the eUICC has to indicate the status of the PINs/PUKs as specified within the template (e.g. remaining attempts, PINs initialised, PINs available, PIN activated/deactivated) provided that the settings have not been altered after profile installation. |
| RQ8.1.5.10 | The eUICC needs to support the PIN attributes specified:<br>- PINs enabled: in this case the PIN shall be enabled.<br>- PIN may be changed: PIN change allowed; otherwise not.<br>- PIN can be disabled: Means that status of the PIN may not be altered.<br>  - Disabled PIN may not be enabled.<br>  - Enabled PIN may not be disabled. |
| RQ8.1.5.11 | It shall be possible to create all possible global PINs within the global PE-PINCodes. |
| RQ8.1.5.12 | It shall be possible to create all second Application PINs within one or more DFs. |
| RQ8.1.5.13 | Two local PINs which have been created separately in two DFs with the same second application PIN ID shall have a separate status; own remaining attempts; own verified status; own enabled/disable status; also different attributes may be applied for the two PINs. |
| RQ8.1.5.14 | PIN Values shall have a length of 8 bytes. Unused bytes are to be padded with FF..FF. |
| RQ8.1.5.15 | It shall be possible to define any value for any PIN: Random Hex Values and also coded as string for user PINs (e.g. PIN 1234 > 31 32 33 34 FF FF FF FF). |
| RQ8.1.5.16 | It shall be possible to assign a PUK value for any PIN. |
| RQ8.1.5.17 | maxNumOfAttemps-retryNumLeft: It shall be possible to assign any value from 0…F for maxNumberOfAttempts and retryNumLeft independent from each other. |
| RQ8.1.5.18 | It shall be possible to create any PIN in enabled or disabled mode. |
| RQ8.1.5.19 | It shall be possible to create any PIN with "PIN can be disabled" stated to define that a PIN status cannot be changed from enabled to disabled and vice versa. |
| RQ8.1.5.20 | It shall be possible to define any PIN with "PIN can be changed" set to allow changing the PIN value; if "PIN can be changed" is not set it shall not be possible to change the PIN. |
| NOTE1: Testing of RQ8.1.5.9, RQ8.1.5.10, RQ8.1.5.11, RQ8.1.5.12, RQ8.1.5.13 is out of scope.<br>NOTE2: Testing of RQ8.1.5.2, RQ8.1.5.4, RQ8.1.5.8, RQ8.1.5.17, RQ8.1.5.19, RQ8.1.5.20 is FFS.NOTE3: RQ8.1.5.15 is not testable. | |

### 8.1.6 Security domains

The test requirements are extracted from section 8.6 of "eUICC Profile Package: Interoperable Format Technical Specification" [SA PP TS].

sim alliance

| RQ8.1.6.1 | The PE Security Domain shall consist of a PE header and an Application Instance object. |
|---|---|
| RQ8.1.6.2 | The values standardised for Supplementary SDs shall be used for the Application Instance object. |
| RQ8.1.6.3 | The PE Security Domain may consist of a keylist and sdPersoData objects. |
| RQ8.1.6.4 | The PE-SecurityDomain shall be used for every SD creation, starting from MNO-SD. |
| RQ8.1.6.5 | The MNO-SD shall be defined and created explicitly using "PE-SecurityDomain" within the Profile Package. |
| RQ8.1.6.6 | The MNO-SD shall be created first before any other SD, before any RFM Parameters are set, or before any applets are created. |
| RQ8.1.6.7 | Since no package AID nor classAID is standardised for the MNO-SD, it shall use the values defined for supplementary SD creation. |
| RQ8.1.6.8 | The first SD within the sequence of the Profile Package shall be categorised as the MNO-SD by definition. |
| RQ8.1.6.9 | The MNO-SD shall be installed with the special MNO-SD privileges defined by the GSMA. |
| RQ8.1.6.10 | All subsequent following instances of SDs shall be installed like regular supplementary SDs as known from GlobalPlatform Card Specification [GP CS]. |
| RQ8.1.6.11 | The keylist optionally present in the Security Domain PE shall be a sequence of key objects. |
| RQ8.1.6.12 | A key object shall contain a keyUsageQualifier, tag number [21] which shall be an OCTET STRING with SIZE of 1. Note: This REQ is applicable up to SA PP TS v2.0 |
| RQ8.1.6.12b | A key object shall contain a keyUsageQualifier, tag number [21] which shall be an OCTET STRING with SIZE of 1 to 2. Note: This REQ is applicable from SA PP TS v2.1 onwards |
| RQ8.1.6.13 | A key object shall contain a keyAccess, tag number [22] which shall be an OCTET STRING with SIZE of 1. |
| RQ8.1.6.14 | A key object shall contain a keyIdentifier, tag number [2] which shall be an OCTET STRING with SIZE of 1. |
| RQ8.1.6.15 | A key object shall contain a keyVersionNumber, tag number [3] which shall be an OCTET STRING with SIZE of 1. |
| RQ8.1.6.16 | A key object shall contain a list of keyComponents. |
| RQ8.1.6.17 | A keyComponent shall contain a keyType, tag number [0], which shall be an OCTET STRING. |
| RQ8.1.6.18 | A keyComponent shall contain a keyData which shall be an OCTET STRING. |
| RQ8.1.6.19 | VOID |
| RQ8.1.6.20 | A key object may contain a keyCounterValue, tag number [5] which shall be an OCTET STRING. |
| RQ8.1.6.20a | If the keyCounterValue is present, it indicates the initial counter associated for that keyset. |
| RQ8.1.6.20b | If the keyCounterValue is absent, the initial counter value shall be set according to the default value of the related protocol (e.g. for SCP02 keyset the default value is '0000'h, for SCP03 it is '000000'h, for SCP80 it is '0000000000'h). |
| RQ8.1.6.21 | VOID |
| RQ8.1.6.22 | Each key to be personalised shall be listed only once. |
| RQ8.1.6.23 | VOID |
| RQ8.1.6.24 | VOID |
| RQ8.1.6.25 | VOID |
| RQ8.1.6.26 | Only keyTypes defined in GlobalPlatform Card Specification [GP CS], Table 11-16, may be part of the list of keyComponents. |
| RQ8.1.6.27 | Each keyComponent shall be specified only once per key (e.g. including the same keyType twice within one KeyObject will lead to an error). |
| RQ8.1.6.28 | In case the sdPersoData is present it shall be a sequence of OCTET STRINGs each containing the data field of a STORE DATA command used to personalise the SD. |
| RQ8.1.6.29 | The content of the data field of the STORE DATA command shall not be encrypted and shall use DGI format. |
| RQ8.1.6.30 | The complete DGI structure for the SD personalisation shall be sent in one complete byte array. |
| RQ8.1.6.31 | Each DGI shall be provided in its own sdPersoData record. |
| RQ8.1.6.32 | Only standardised DGIs, according to GlobalPlatform Card Specification [GP CS], shall be sent when addressing a SD. |
| RQ8.1.6.33 | Installation of the CASD, if required inside a Profile, shall use the same personalisation procedure as defined for SDs. |
| RQ8.1.6.34 | In case RAM and OTA HTTPs is added to a SD the settings can be configured according to GlobalPlatform Card Specification [GP CS] and ETSI specifications. |
| RQ8.1.6.35 | In case RAM is be added to a SD the TAR values for RAM can be configured as follows:<br>- Bytes 13-15 of the SD instance AID.<br>- TAR List within SD install parameters. |
| RQ8.1.6.36 | VOID |
| RQ8.1.6.36a | If OTA HTTPS is added to a SD OTA HTTPs may be provided within the sdPersoData included in DGI '0070' using in tag '85' according to GlobalPlatform Amd B [GP AB] (Section 3.7.1 TLV: Security Domain Administration Session Parameters) in the PE-SecurityDomain structure of the respective security domain. |

| | |
|---|---|
| RQ8.1.6.37 | IfRAM is added to a SD the security level for RAM shall be defined by the MSL parameter of the SD installation parameters. |
| RQ8.1.6.38 | VOID |
| RQ8.1.6.38a | IfRAM is added to a SD, TAR values to the Security Domains as specified in TS 101 220 [101 220] should be assigned. |
| RQ8.1.6.39 | The configuration of the PoR (Proof of Receipt) handling shall not be part of the Profile definition. |
| RQ8.1.6.40 | The eUICC shall follow the latest ETSI and 3GPP release to provide the necessary level of security. |
| RQ8.1.6.41 | There may be SSDs which belong to independent SD hierarchies with a self-extradited SSD as root SD. |
| RQ8.1.6.42 | A keyComponent shall contain a macLength which shall be an UInt8 DEFAULT 8. |
| RQ8.1.6.43 | If macLength is for AES KID keys, indicates the length of the MAC in bytes as defined in TS 102 226 [102 226]. |
| RQ8.1.6.44 | macLength shall be ignored for other key types than AES KID. |
| RQ8.1.6.45 | If keyType or any other KeyObject parameters are not supported by the eUICC, the error code feature-not-supported shall be returned and the installation of the Profile Package shall be aborted. |
| RQ8.1.6.46 | Parameters using TLV format may be included in DGI '0070' as defined by GlobalPlatform Card Specification [GP CS]. |
| RQ8.1.6.47 | keyUsageQualifier and keyAccess shall be ignored for SCP80 and SCP81 keys. Note: This REQ is applicable from SA PP TS v2.1 onwards. |
| NOTE 1: RQ8.1.6.9 is not tested in this specification. Its verification is under the scope of the GSMA. NOTE 2: Testing of RQ8.1.6.20, RQ8.1.6.20a, RQ8.1.6.20b, RQ8.1.6.33, RQ8.1.6.41, RQ8.1.6.42, RQ8.1.6.43, RQ8.1.6.44 and RQ8.1.6.45 is FFS. NOTE 3: RQ8.1.6.39 is not testable. NOTE 4: RQ8.1.6.32 is not tested in this specification. Its verification is under the scope of GlobalPlatform. NOTE 5: RQ8.1.6.22 , RQ8.1.6.40 and RQ8.1.6.47 are out of scope of this specification. | |

### 8.1.7    Application loading and installation

The test requirements are extracted from section 8.7 of "eUICC Profile Package: Interoperable Format Technical Specification" [SA PP TS].

| RQ8.1.7.1 | A library shall be loaded when only an ApplicationLoadPackage object is provided within one Application PE. |
|---|---|
| RQ8.1.7.2 | A preloaded application shall be installed only when an ApplicationInstance object is provided within one Application PE. |
| RQ8.1.7.3 | Multiple instances of the same application shall be installed when multiple ApplicationInstance objects are provided within one Application PE. |
| RQ8.1.7.4 | An application shall be loaded providing an ApplicationLoadPackage object and installed via an ApplicationInstance. |
| RQ8.1.7.5 | An application shall be installed when an ApplicationInstance object is provided within one Application PE. |
| RQ8.1.7.6 | If PEHeader object is set to mandatory, profile installation shall fail if one of the subsequent elements cannot be executed (e.g. load fails because of API incompatibility, install fails because of duplicate TAR values …). |
| RQ8.1.7.7 | If PEHeader object is not set to mandatory, profile installation shall continue with the next PE if one of the subsequent elements cannot be executed (e.g. load fails because of API incompatibility, install fails because of duplicate TAR values …). |
| RQ8.1.7.8 | The loadPackageAID object shall be based on the GP2.2 Load Command according to GlobalPlatform Card Specification [GP CS]. |
| RQ8.1.7.9 | The loadPackageAID object is mandatory and shall be an ApplicationIdentifier. |
| RQ8.1.7.10 | The securityDomainAID object shall be based on the GP2.2 Load Command according to GlobalPlatform Card Specification [GP CS]. |
| RQ8.1.7.11 | The securityDomainAID object is optional and shall be an ApplicationIdentifier. |
| RQ8.1.7.12 | The nonVolatileCodeLimitC6 object shall be based on the GP2.2 Load Command according to GlobalPlatform Card Specification [GP CS]. |
| RQ8.1.7.13 | The nonVolatileCodeLimitC6 object is optional and it shall be an OCTET STRING. |
| RQ8.1.7.14 | The volatileDataLimitC7 object shall be based on the GP2.2 Load Command according to GlobalPlatform Card Specification [GP CS]. |
| RQ8.1.7.15 | The volatileDataLimitC7 object is optional and it shall be an OCTET STRING. |
| RQ8.1.7.16 | The nonVolatileDataLimitC8 object shall be based on the GP2.2 Load Command according to GlobalPlatform Card Specification [GP CS]. |
| RQ8.1.7.17 | The nonVolatileDataLimitC8 object is optional and it shall be an OCTET STRING. |
| RQ8.1.7.18 | The hashValue object shall be based on the GP2.2 Load Command according to GlobalPlatform Card Specification [GP CS]. |
| RQ8.1.7.19 | The hashValue object is optional and it shall be an OCTET STRING. |
| RQ8.1.7.20 | The loadBlockObject object shall contain the complete load block. |
| RQ8.1.7.21 | The loadBlockObject object is mandatory and it shall be an OCTET STRING. |
| RQ8.1.7.22 | The coding of applicationLoadPackageAID object shall follow the coding defined for Install for Install defined by GlobalPlatform Card Specification [GP CS]. |
| RQ8.1.7.23 | The applicationLoadPackageAID object is mandatory and shall be an ApplicationIdentifier. |
| RQ8.1.7.24 | The coding of classAID object shall follow the coding defined for Install for Install defined by GlobalPlatform Card Specification [GP CS]. |
| RQ8.1.7.25 | The classAID object is mandatory and shall be an ApplicationIdentifier. |
| RQ8.1.7.26 | The coding of instanceAID object shall follow the coding defined for Install for Install defined by GlobalPlatform Card Specification [GP CS]. |
| RQ8.1.7.27 | The instanceAID object is mandatory and shall be an ApplicationIdentifier. |
| RQ8.1.7.28 | The extraditeSecurityDomainAID object shall have the same effect as the Install for Extradition command defined by GlobalPlatform Card Specification [GP CS]. |
| RQ8.1.7.29 | The extraditeSecurityDomainAID object is optional and shall be an ApplicationIdentifier. |
| RQ8.1.7.30 | If the extraditeSecurityDomainAID object value is not provided, the instance shall be associated to the MNO-SD by default. |
| RQ8.1.7.31 | The coding of applicationPrivileges object shall follow the coding defined for Install for Install defined by GlobalPlatform Card Specification [GP CS]. |
| RQ8.1.7.32 | The applicationPrivileges object is mandatory and it shall be an OCTET STRING. |
| RQ8.1.7.33 | The coding of lifeCycleState object shall follow the coding Life Cycle State defined within GlobalPlatform Card Specification [GP CS] (section 11.1.1 Life Cycle Coding). |
| RQ8.1.7.34 | VOID |
| RQ8.1.7.34a | The lifeCycleState object is optional for the Profile Package and it shall be an OCTET STRING. If not provided the default value INSTALLED AND SELECTABLE ('07'H) shall be assigned. |
| RQ8.1.7.34b | If the lifeCycleState object is provided the provided value shall be assigned. |
| RQ8.1.7.35 | The coding of applicationSpecificParametersC9 object shall follow the coding defined for Install for Install defined by GlobalPlatform Card Specification [GP CS]. |
| RQ8.1.7.36 | The applicationSpecificParametersC9 object is mandatory and it shall be an OCTET STRING. |
| RQ8.1.7.37 | The coding of systemSpecificParameters object shall follow the coding defined for Install for Install |

| | defined by GlobalPlatform Card Specification [GP CS]. |
|---|---|
| RQ8.1.7.38 | The systemSpecificParameters object is optional and it shall be an ApplicationSystemParameters. |
| RQ8.1.7.39 | The coding of applicationParameters object shall follow the coding defined in ETSI TS 102 226 [102 226]. |
| RQ8.1.7.40 | The applicationParameters object is optional and it shall be an UICCApplicationParameters. |
| RQ8.1.7.41 | The applicationParameters can be used to define the access domain for an applet. |
| RQ8.1.7.42 | The applicationParameters can be used to define the MSL (Minimum Security Level) for an applet or an RFM instance. |
| RQ8.1.7.43 | The processData object is optional and it shall be a SEQUENCE OF OCTET STRING. |
| RQ8.1.7.44 | The processData object octet string shall be directly sent to the respective application instance for processing through the "processData" method of the "Application" or "Personalization" interface of the application. |
| RQ8.1.7.45 | The processData object may contain all the bytes contained in a STORE DATA command (Including CLA,INS, P1, P2, L) if required by the application but encryption shall not be used.<br><br>Note: This test specification will consider this as mandatory otherwise it is not predictable. |
| RQ8.1.7.46 | The processData object shall contain data for the application and no decryption shall be performed by the respective SD. |
| RQ8.1.7.47 | The volatileMemoryQuotaC7 is optional and it shall be an OCTET STRING. |
| RQ8.1.7.48 | The nonvolatileMemoryQuotaC8 is optional and it shall be an OCTET STRING. |
| RQ8.1.7.49 | The globalServiceParameters is optional and it shall be an OCTET STRING. |
| RQ8.1.7.50 | The implicitSelectionParameter is optional and it shall be an OCTET STRING. |
| RQ8.1.7.51 | The volatileReservedMemory is optional and it shall be an OCTET STRING. |
| RQ8.1.7.52 | The nonVolatileReservedMemory is optional and it shall be an OCTET STRING. |
| RQ8.1.7.53 | The ts102226SIMFileAccessToolkitParameter is optional and it shall be an OCTET STRING. |
| RQ8.1.7.54 | The ts102226AdditionalContactlessParameters is optional and it shall be a TS102226AdditionalContactlessParameters. |
| RQ8.1.7.55 | The uiccToolkitApplicationSpecificParametersField is optional and it shall be an OCTET STRING. |
| RQ8.1.7.56 | The uiccAccessApplicationSpecificParametersField is optional and it shall be an OCTET STRING. |
| RQ8.1.7.57 | VOID |
| RQ8.1.7.58 | The uiccAdministrativeAccessApplicationSpecificParametersField is optional and it shall be an OCTET STRING. |
| RQ8.1.7.59 | The protocolParameterData is mandatory and it shall be OCTET STRING. |
| RQ8.1.7.60 | The processData object shall be provided to the respective applet instance, with the supported processData method according to GlobalPlatform Card Specification [GP CS]. |
| RQ8.1.7.61 | The Application PE shall be used after the security domain to which the application instance is associated to is created by using PE-SecurityDomain. |
| RQ8.1.7.62 | In case no value for the optional parameter securityDomainAID is provided, the package will be associated to the MNO-SD by default. |
| RQ8.1.7.63 | The contactlessProtocolParameters is optional and it shall be OCTET STRING. |
| RQ8.1.7.64 | The contactlessProtocolParameters shall be coded according to Contactless Protocol Parameters Structure as defined in GlobalPlatform Amd. C [XXX]. |
| RQ8.1.7.65 | The userInteractionContactlessParameters is optional and it shall be OCTET STRING |
| RQ8.1.7.66 | The userInteractionContactlessParameters shall be coded according to User Interaction Parameters Structure as defined in GlobalPlatform Amd. C [XXX]. |
| RQ8.1.7.67 | The protocolParameterData shall be encoded according to ETSI TS 102 226 [XXX]. |
| RQ8.1.7.68 | The whole PE should be discarded, if the processData object is provided in the PE, but the application does not implement the "processData" method. The eUICC may abort the Profile Package installation if it cannot recover the error. |
| RQ8.1.7.69 | An application (or SD) shall only be associated to an SD in Life Cycle State PERSONALIZED. Note: This REQ is applicable from SA PP TS v2.1 onwards |
| RQ8.1.7.69b | If an application (or SD) is associated to an SD in Life Cycle State different from PERSONALIZED, the error code invalid-parameter shall be returned and the installation of the Profile Package shall be aborted. Note: This REQ is applicable from SA PP TS v2.1 onwards |
| NOTE1: Testing of RQ8.1.7.33, RQ8.1.7.49, RQ8.1.7.53, RQ8.1.7.54, RQ8.1.7.56, RQ8.1.7.59 , RQ8.1.7.61, RQ8.1.7.63, RQ8.1.7.64, RQ8.1.7.65, RQ8.1.7.66, RQ8.1.7.67 and RQ8.1.7.68 is FFS.<br>NOTE2: RQ8.1.7.2 is not testable. | |

### 8.1.8 RFM Parameters

The test requirements are extracted from section 8.8 of "eUICC Profile Package: Interoperable Format Technical Specification" [SA PP TS].

| | |
|---|---|
| RQ8.1.8.1 | RFM Parameters PE shall appear after PE containing the related SD. |
| RQ8.1.8.1b | RFM Parameters PE shall appear after PE containing the related ADF. |
| RQ8.1.8.2 | RFM Parameters PE is optional and may be used several times. |
| RQ8.1.8.3 | The securityDomainAID object is optional. If present an RFM instance shall be associated with the referenced SD. If not present, the RFM instance shall be associated with the MNO-SD. |
| RQ8.1.8.4 | A RFM instance shall be addressable with  given TAR values. |
| RQ8.1.8.5 | A RFM instance shall be associated with at most one ADF. |
| RQ8.1.8.6 | RFM Parameters PE shall contain PEHeader object. |
| RQ8.1.8.7 | If securityDomainAID is present is shall be ApplicationIdentifier type, tag 15. |
| RQ8.1.8.8 | RFM Parameters may contain tarList. If tarList is present it shall be a sequence of OCTET STRING of size 3, tag 0. |
| RQ8.1.8.8a | tarList shall include at least one TAR if available. |
| RQ8.1.8.8b | If tarList is not available the TAR value defined within bytes 13-15 of the instanceAID is used. |
| RQ8.1.8.9 | RFM Parameters shall contain minimumSecurityLevel of OCTET STRING of size 1, tag 1. |
| RQ8.1.8.10 | The Minimum Security Level (MSL) for the RFM instance shall be interpreted according to ETSI TS 102 226. |
| RQ8.1.8.11 | RFM Parameters shall contain uiccAccessDomain of OCTET STRING of variable size. |
| RQ8.1.8.12 | RFM Parameters shall contain uiccAdminAccessDomain field of OCTET STRING of variable size. |
| RQ8.1.8.13 | RFM Parameters may contain adfRFMAccess of ADFRFMAccess type. |
| RQ8.1.8.14 | ADFRFMAccess object shall contain adfAID of ApplicationIdentifier type. |
| RQ8.1.8.15 | ADFRFMAccess object shall contain adfAccessDomain of OCTET STRING of variable size. |
| RQ8.1.8.16 | ADFRFMAccess object shall contain adfAdminAccessDomain of OCTET STRING of variable size. |
| RQ8.1.8.17 | If adfRFMAccess is not provided, the RFM instance shall be linked only to the MF. |
| RQ8.1.8.18 | If adfRFMAccess is provided, corresponding ADF shall be selected by default in the context of an RFM script. |
| RQ8.1.8.19 | If adfRFMAccess is not provided, the MF shall be selected by default in the context of an RFM script. |
| RQ8.1.8.20 | RFM Parameters PE shall contain instanceAID of ApplicationIdentifier type, tag 15. |
| NOTE1: Testing of RQ8.1.8.5, RQ8.1.8.6, RQ8.1.8.8b, RQ8.1.8.10 is out of scope of this specification. NOTE2: Testing of RQ8.1.8.3 and RQ8.1.8.7 is FFS. | |

### 8.1.9 Non standardised content

The test requirements are extracted from section 8.9 of "eUICC Profile Package: Interoperable Format Technical Specification" [SA PP TS].

| | |
|---|---|
| RQ8.1.9.1 | The Profile Package can use as many PE-NonStandard profile elements as required. |
| RQ8.1.9.2 | PE-NonStandard shall contain a "nonstandard-header" object. The type of the "nonstandard-header" object is PEHeader. |
| RQ8.1.9.3 | PE-NonStandard shall contain an "issuerID" object. The type of the issuerID shall be OBJECT IDENTIFIER. |
| RQ8.1.9.4 | PE-NonStandard shall contain "content" object. The type of the content shall be OCTET STRING. |
| Note; RQ8.1.9.1, RQ8.1.9.2, RQ8.1.9.3 and RQ8.1.9.4 are out of scope of this specification. | |

### 8.1.10 Profile Package end

The test requirements are extracted from section 8.10 of "eUICC Profile Package: Interoperable Format Technical Specification" [SA PP TS].

| | |
|---|---|
| RQ8.1.10.1 | The PE-End shall contain an "end-header" object. The type of the "end-header" object is PE Header. |
| RQ8.1.10.2 | The support of PE-End is mandatory for eUICC. |
| RQ8.1.10.3 | The PE shall be used as the last element of the Profile Package. |

### 8.1.11        eUICC Response type

The test requirements are extracted from section 8.11 and 9.5.2 of "eUICC Profile Package: Interoperable Format Technical Specification" [SA PP TS].

| RQ8.1.11.1 | EUICCResponse object shall contain peStatus field of SEQUENCE OF PEStatus type. |
|---|---|
| RQ8.1.11.2 | EUICCResponse object may contain profileInstallationAborted field of NULL type. |
| RQ8.1.11.2a | When profileInstallationAborted is used, it shall be present in the last EUICCResponse sent by the eUICC. |
| RQ8.1.11.3 | EUICCResponse object may contain statusMessage field of UTF8String type. |
| RQ8.1.11.4 | PEStatus object shall contain status field of INTEGER type. |
| RQ8.1.11.5 | PEStatus object may contain identification field of Uint15 type. |
| RQ8.1.11.6 | The identification field, if present, shall indicate the identification number of the PE triggering the error. |
| RQ8.1.11.7 | VOID |
| RQ8.1.11.7a | The identification field shall be present if EUICCResponse contains an error status except the following cases:<br>- error status is reported for Profile Header<br>- no identification field is provided in the PE Header |
| RQ8.1.11.8 | PEStatus object may contain additional-information field of Uint8 type. |
| RQ8.1.11.9 | EUICCResponse with ok status shall be sent at the end of the profile installation when the Profile has been processed successfully, and only if there is nothing to report. |
| RQ8.1.11.10 | EUICCResponse with ok status shall not indicate any PE identification. |
| RQ8.1.11.11 | EUICCResponse with PE-not-supported status indicates that a specific PE is not supported by the eUICC. |
| RQ8.1.11.12 | EUICCResponse with PE-not-supported status shall include profileInstallationAborted tag if an unsupported PE is indicated as "mandated". |
| RQ8.1.11.12a | If the PE generating PE-not-supported status does not indicate "mandated" in the PE header this status is a warning status and the installation of the Profile shall be continued. |
| RQ8.1.11.13 | EUICCResponse with memory-failure status indicates profile installation failure due to internal memory issue . |
| RQ8.1.11.13a | If memory-failure is reported, the eUICC shall abort profile installation. |
| RQ8.1.11.14 | EUICCResponse with bad-values status indicates that at least one value in the PE identified by its identification number is out of its acceptable value range. |
| RQ8.1.11.14a | In the case bad-values is reported, the eUICC may abort profile installation if it is not able to recover the error. Note: This REQ is applicable up to SA PP TS v2.0. |
| RQ8.1.11.14b | If the PE generating bad-values status indicates "mandated" in the PE header and the eUICC cannot apply a default value, this status is an error status and the processing of the Profile shall be aborted.<br>Note: This REQ is applicable from SA PP TS v2.1 onwards. |
| RQ8.1.11.14c | If the PE generating bad-values status does not indicate "mandated" in the PE header this status is a warning status and the installation of the Profile shall be continued.<br>Note: This REQ is applicable from SA PP TS v2.1 onwards. |
| RQ8.1.11.15 | EUICCResponse with not-enough-memory status indicates that eUICC does not have enough free memory to install the Profile. |
| RQ8.1.11.15a | If the eUICC runs out of memory during processing PE-MF, it shall abort profile installation. |
| RQ8.1.11.15b | If the eUICC runs out of memory during processing a PE with "mandated" flag set, it shall abort profile installation. Note: This REQ is applicable up to SA PP TS v2.0. |
| RQ8.1.11.15c | If eUICC does not have enough free memory to install the Profile the processing of the Profile shall be aborted. Note: This REQ is applicable from SA PP TS v2.1 onwards. |
| RQ8.1.11.16 | EUICCResponse with invalid-request-format indicates that a structure in a PE is unknown or badly formatted, or that the order of the PEs is invalid .<br>Note: It is not required that the eUICC is able to detect and reject all invalid formats, or all the incorrect order of the PEs. |
| RQ8.1.11.16a | VOID (Note: combined with RQ8.1.1.16) |
| RQ8.1.11.16b | The eUICC shall abort profile installation if invalid-request-format error is triggered by any of following PEs:<br>- PE-AKA-Parameters<br>- PE-CSIM-Parameters<br>- PE-PIN-Code<br>- PE-PUK-Code<br>- PE-Security-Domain<br>- PE-RFM-Parameters<br><br>For other PE-s the eUICC may abort profile installation in case invalid-request-format error is triggered and the eUICC is not able to recover the error. Note: This REQ is applicable up to SA PP TS v2.0. |
| RQ8.1.11.16c | The eUICC shall abort profile installation if invalid-request-format error is triggered by any of following PEs:<br>- Profile Header<br>- PE-AKA-Parameters<br>- PE-CSIM-Parameters |

| | |
|---|---|
| | - PE-PIN-Code<br>- PE-PUK-Code<br>- PE-Security-Domain<br>- PE-RFM-Parameters<br><br>Note: This REQ is applicable from SA PP TS v2.1 onwards. |
| RQ8.1.11.16d | The eUICC may abort profile installation in case invalid-request-format error is triggered by any of following PEs and the eUICC is not able to recover the error by ignoring some non-mandatory parts of the Profile, or for any other reason:<br>- PE-MF<br>- DF-CD<br>- DF-TELECOM<br>- PE USIM<br>- PE OPT USIM<br>- PE ISIM<br>- PE OPT ISIM<br>- PE CSIM<br>- PE OPT CSIM<br>- PE Application<br>- PE Non Standardized<br>Note: This REQ is applicable from SA PP TS v2.1 onwards. |
| RQ8.1.11.17 | EUICCResponse with invalid-parameter indicates that a parameter in a PE description is not supported. |
| RQ8.1.11.17a | The eUICC shall abort profile installation if invalid-parameter error is triggered by any of following PEs:<br>- PE-AKA-Parameters<br>- PE-CSIM-Parameters<br>- PE-PIN-Code<br>- PE-PUK-Code<br>- PE-Security-Domain<br>- PE-RFM-Parameters<br><br>For other PE-s the eUICC may abort profile installation if an invalid parameter is detected, and the eUICC is not able to recover the error.<br>Note: This REQ is applicable up to SA PP TS v2.0. |
| RQ8.1.11.17b | The invalid-parameter status code shall be used when the eUICC encounters an unknown tag inside a PE.<br>Note: This REQ is applicable from SA PP TS v2.1. |
| RQ8.1.11.17c | The eUICC shall abort profile installation if invalid-parameter error is triggered by any of following PEs:<br>- Profile Header<br>- PE-AKA-Parameters<br>- PE-CSIM-Parameters<br>- PE-PIN-Code<br>- PE-PUK-Code<br>- PE-Security-Domain<br>- PE-RFM-Parameters<br><br>Note: This REQ is applicable from SA PP TS v2.1. |
| RQ8.1.11.17d | The eUICC shall abort profile installation if invalid-parameter error is triggered by any of following PEs, and the PE triggering the error indicates "mandated" in the PE header and the eUICC cannot ignore the parameter which triggers the error:<br>- PE-MF<br>- DF-CD<br>- DF-TELECOM<br>- PE USIM<br>- PE OPT USIM<br>- PE ISIM<br>- PE OPT ISIM<br>- PE CSIM<br>- PE OPT CSIM<br>- PE Application<br>- PE Non Standardized<br>Note: This REQ is applicable from SA PP TS v2.1 onwards. |
| RQ8.1.11.18 | EUICCResponse with runtime-not-supported status indicates that an application present in a PE-Application requires a runtime environment that is not supported by the eUICC. |

| | |
|---|---|
| RQ8.1.11.18a | If an unsupported runtime environment is requested by a PE with "mandated" flag set the eUICC shall abort profile installation. |
| RQ8.1.11.18b | If an unsupported runtime environment is requested by a PE without "mandated" flag, this is just a warning and the installation of the Profile shall continue and the application shall be ignored.<br>Note: This REQ is applicable from SA PP TS v2.1. |
| RQ8.1.11.19 | EUICCResponse with lib-not-supported status indicates that a library required by an application present in a PE-Application is not available in the eUICC. |
| RQ8.1.11.19a | If a missing library is requested by a PE with "mandated" flag set the eUICC shall abort profile installation. |
| RQ8.1.11.19b | If a missing library is requested by a PE without "mandated" flag set this is just a warning and the installation of the Profile shall continue and the application shall be ignored.<br>Note: This REQ is applicable from SA PP TS v2.1. |
| RQ8.1.11.20 | EUICCResponse with template-not-supported status indicates that the template indicated by the OBJECT IDENTIFIER in the templateID or in the eUICC-Mandatory-GFSTEList is not available in the eUICC (i.e. non-standard template or template version not supported). |
| RQ8.1.11.20a | VOID |
| RQ8.1.11.20b | If the eUICC sends template-not-supported error indicating that one, or more of the file system templates identified in the Profile Header is not supported the eUICC shall abort profile installation. |
| RQ8.1.11.20c | If a file system template PE triggering the template-not-supported error has "mandated" flag set the eUICC shall abort profile installation. |
| RQ8.1.11.20d | The eUICC shall abort profile installation if template-not-supported error is triggered by any of following PEs:<br>   -    PE-MF<br>   -    DF-CD<br>   -    DF-TELECOM<br>Note: This REQ is applicable from SA PP TS v2.1. |
| RQ8.1.11.20e | For the PE-s listed below if a PE triggering the template-not-supported error has "mandated" flag set, the eUICC shall abort profile installation:<br>   -    PE USIM<br>   -    PE OPT USIM<br>   -    PE ISIM<br>   -    PE OPT ISIM<br>   -    PE CSIM<br>   -    PE OPT CSIM<br>Note: This REQ is applicable from SA PP TS v2.1. |
| RQ8.1.11.20f | For the PE-s listed below if a PE triggering the template-not-supported error has no "mandated" flag set, the installation of the Profile shall continue and the file system described by this PE shall not be created:<br>   -    PE USIM<br>   -    PE OPT USIM<br>   -    PE ISIM<br>   -    PE OPT ISIM<br>   -    PE CSIM<br>   -    PE OPT CSIM<br>Note: This REQ is applicable from SA PP TS v2.1. |
| RQ8.1.11.21 | EUICCResponse with feature-not-supported status indicates that a feature included in the PE, or in the ServicesList of the Profile Header is not supported by the eUICC. |
| RQ8.1.11.22 | feature-not-supported status shall be sent if Optional USIM EFs PE contains any of EF GBABP, EF MSK, EF MUK, EF GBANL and EF NAFKCA and respective services are not supported at the eUICC operating system level.<br>In this case, PEStatus object shall contain additional-information field set to '1' if GBA is not supported, to '2' if MBMS if not supported and '3' if both are not supported. |
| RQ8.1.11.22a | VOID |
| RQ8.1.11.22b | The eUICC shall abort profile installation if the feature-not-supported error is triggered by Profile Header (the eUICC does not support a feature included in the ServiceList of the Profile Header). |
| RQ8.1.11.22c | The eUICC shall abort profile installation if feature-not-supported error is triggered by any of following PEs:<br>   -    PE-AKA Parameters<br>   -    PE-CSIM Parameters<br>Note: This REQ is applicable from SA PP TS v2.1. |
| RQ8.1.11.22d | For the PE-s listed below if a PE triggering the feature -not-supported error has "mandated" flag set the eUICC shall abort profile installation:<br>   -    DF-CD<br>   -    DF-TELECOM<br>   -    PE USIM<br>   -    PE OPT USIM |

| | |
|---|---|
| | - PE ISIM<br>- PE OPT ISIM<br>- PE CSIM<br>- PE OPT CSIM<br>- PE Generic File Management<br>- PE Security Domain<br>- PE Application<br>- PE RFM Parameters<br>- PE Non Standardized<br>Note: This REQ is applicable from SA PP TS v2.1. |
| RQ8.1.11.22e | For the PE-s listed below if a PE triggering the feature -not-supported error has no "mandated" flag set the installation of the Profile shall continue and the feature shall be ignored:<br>- DF-CD<br>- DF-TELECOM<br>- PE USIM<br>- PE OPT USIM<br>- PE ISIM<br>- PE OPT ISIM<br>- PE CSIM<br>- PE OPT CSIM<br>- PE Generic File Management<br>- PE Security Domain<br>- PE Application<br>- PE RFM Parameters<br>- PE Non Standardized<br>Note: This REQ is applicable from SA PP TS v2.1. |
| RQ8.1.11.23 | EUICCResponse with unsupported-profile-version status indicates that the major version indicated in the Profile Header is not supported by the eUICC., |
| RQ8.1.11.23a | EUICCResponse with unsupported-profile-version status is an error status and the processing of the Profile shall be aborted. |
| RQ8.1.11.24 | VOID |
| RQ8.1.11.25 | If the installation of the Profile is aborted EUICCResponse shall contain profileInstallationAborted tag. |
| NOTE 1: RQ8.1.11.1 is implicitly tested everytime UICC response with PEStatus is sent.<br>NOTE 2: Testing of RQ8.1.11.5, RQ8.1.11.6, RQ8.1.11.8, RQ8.1.11.11, RQ8.1.11.12, RQ8.1.11.14, RQ8.1.11.14a, RQ8.1.11.15a, RQ8.1.11.16b, RQ8.1.11.16c, RQ8.1.11.16d, RQ8.1.11.17a, RQ8.1.11.17c, RQ8.1.11.18, RQ8.1.11.18a, RQ8.1.11.20c, RQ8.1.11.22 is FFS.<br>NOTE3: RQ8.1.11.3, RQ8.1.11.13 and RQ8.1.11.13a are not testable. ||

## 8.2     Test cases / scenarios

### 8.2.1     Check Profile Format

#### 8.2.1.1.     VOID

#### 8.2.1.2.     Installing profile with PE-USIM before PE-MF, eUICC reports error.

##### 8.2.1.2.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

##### 8.2.1.2.2. Initial Conditions

None.

##### 8.2.1.2.3. Test Procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10 . | RQ8.1.1.16 |
| 2 | eUICC → T | eUICC responds with PEStatus(5) invalid-request-format and identification of USIM-by-Generic-File-Management-1, or with PEStatus different from (0) and identification of USIM-by-Generic-File-Management-1<br>The last eUICC response contains profileInstallationAborted object. | RQ8.1.11.2<br>RQ8.1.11.2a<br>RQ8.1.11.16<br>RQ8.1.11.25 |
| 3 | T ↔ eUICC | Enabling Profile Package according to 6.11 fail. | |

### 8.2.1.3. Installing profile with PE-Application before PE-SecurityDomain, eUICC reports error.

#### 8.2.1.3.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.1.3.2. Initial Conditions

None.

#### 8.2.1.3.3. Test Procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.1.36<br>RQ8.1.1.36b |
| 2 | eUICC → T | eUICC responds with PEStatus (5) invalid-request-format and identification of PE-Application-1, or with PEStatus different from (0) and identification of PE-Application-1. The last eUICC response contains profileInstallationAborted object. | RQ8.1.6.6<br>RQ8.1.11.2<br>RQ8.1.11.2a<br>RQ8.1.11.16<br>RQ8.1.11.25 |
| 3 | T ↔ eUICC | Enabling Profile Package according to 6.11 fail. | |

*8.2.1.4.1. Test execution*

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-END-1 | 6.14.14.1 |

*8.2.1.4.2. Initial Conditions*

None.

*8.2.1.4.3. Test Procedure*

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.1.37 |
| 2 | eUICC → T | eUICC responds with PEStatus (5) invalid-request-format and identification of PE-RFM-1, or with PEStatus different from (0) and identification of PE-RFM-1.<br>The last eUICC response contains profileInstallationAborted object. | RQ8.1.6.6<br>RQ8.1.8.1<br>RQ8.1.11.2<br>RQ8.1.11.2a<br>RQ8.1.11.16<br>RQ8.1.11.25 |
| 3 | T ↔ eUICC | Enabling Profile Package according to 6.11 fail. | |

### 8.2.1.5. Installing profile with PE-USIM before PE-MF.

#### 8.2.1.5.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-RFM-2 | 6.14.13.2 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.1.5.2. Initial Conditions

None.

#### 8.2.1.5.3. Test Procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.1.16 |
| 2 | eUICC → T | eUICC responds with PEStatus (0) ok. eUICC response contains no PE Identification. | RQ8.1.11.9 RQ8.1.11.10 |
| 3 | T ↔ eUICC | Enable Profile Package according to 6.11. | |
| 4 | T ↔ eUICC | Select all files in MF and verify their FCPs. | |
| 5 | T ↔ eUICC | Read all files in MF and verify that the content is the same as defined in the MF-by-Generic-File-Management-1 | |
| 6 | T ↔ eUICC | Select all files in ADF USIM and verify their FCPs. | |
| 7 | T ↔ eUICC | Read all files in ADF USIM and verify that the content is the same as defined in the USIM-by-Generic-File-Management-1 | |

### 8.2.1.6. Installing profile with PE-Application before PE-SecurityDomain, eUICC supports the installation.

FFS

### 8.2.1.7. Installing profile with PE-RFM before PE-SecurityDomain, eUICC supports the installation.

FFS

## 8.2.2 Check Profile Header

Requirements related to Profile Header are tested in 8.2.3 and 8.2.11.

### 8.2.3 Check File System

#### 8.2.3.1. Installing USIM files by generic file management

##### 8.2.3.1.1. Test execution

The Profile Package is defined as follows:

| Test PE name | REFERENCE |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| DF-CD-by-Generic-File-Management-1 | 6.14.2.2.2 |
| DF-CUSTOM-by-Generic-File-Management-1 | 6.14.2.4.1 |
| USIM-by-Generic-File-Management-2 | 6.14.5.1.4 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| OPT-USIM-by-Generic-File-Management-1 | 6.14.5.2.2 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-RFM-2 | 6.14.13.2 |
| PE-END-1 | 6.14.14.1 |

##### 8.2.3.1.2. Initial Conditions

None.

##### 8.2.3.1.3. Test Procedure

### 8.2.3.2. Installing USIM files by template

#### 8.2.3.2.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-2 | 6.14.1.2 |
| PE-MF-by-Template-1 | 6.14.2.1.1 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| PE-CD-by-Template-1 | 6.14.2.2.1 |
| PE-TELECOM-by-Template-1 | 6.14.2.3.1 |
| PE-USIM-by-Template-3 | 6.14.5.1.5 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-OPT-USIM-by-Template-1 | 6.14.5.2.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-RFM-2 | 6.14.13.2 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.3.2.2. Initial Conditions

None.

#### 8.2.3.2.3. Test Procedure

#### 8.2.3.7.2. Initial Conditions

None.

#### 8.2.3.7.3. Test Procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package according to 6.10 . | RQ7.1.1.5 RQ8.1.2.17 |
| 2 | eUICC → T | eUICC response with PEStatus containing status (10) feature-not-supported and identification of DF-CUSTOM-by-Generic-File-Management-2 and no additional-information object. eUICC response contains no profileInstallationAborted object | RQ8.1.11.21 RQ8.1.11.22e |
| 3 | T ↔ eUICC | Enable Profile Package according to 6.11. | |
| 4 | T ↔ eUICC | Select all files in DF TELECOM and verify their FCPs. | |
| 5 | T ↔ eUICC | Read all files in DF TELECOM and verify that the content is the same as defined in the PE-TELECOM-by-Template-1 | |
| 6 | T ↔ eUICC | Select DF LINK (fileID '7FA1'), as defined in DF-CUSTOM-by-Generic-File-Management-2 and verify that it does not exist e.g. SW '6A82'. | |
| 7 | T ↔ eUICC | Select all files in ADF USIM and verify their FCPs. | |
| 8 | T ↔ eUICC | Read all files in ADF USIM except the EF UST and verify that the content is the same as defined in the PE-USIM-by-Template-4. EF EPSLOCI shall not be present. | |

### 8.2.3.8.   Creating a DF with dfLink when eUICC supports dfLink.

#### 8.2.3.8.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| DF-CD-by-Generic-File-Management-1 | 6.14.2.2.2 |
| DF-CUSTOM-by-Generic-File-Management-3 | 6.14.2.4.3 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-RFM-2 | 6.14.13.2 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.3.8.2. Initial Conditions

None.

#### 8.2.3.8.3. Test Procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package according to 6.10 . | RQ8.1.1.6<br>RQ8.1.1.7<br>RQ8.1.1.8<br>RQ8.1.1.9<br>RQ8.1.1.12<br>RQ8.1.1.13b<br>RQ8.1.1.25<br>RQ8.1.1.26<br>RQ8.1.1.26b<br>RQ8.1.1.27<br>RQ8.1.1.28a<br>RQ8.1.1.29a<br>RQ8.1.1.33a<br>RQ8.1.1.34<br>RQ8.1.1.39<br><br>RQ8.1.2.1<br>RQ8.1.2.2<br>RQ8.1.2.3<br>RQ8.1.2.4<br>RQ8.1.2.6<br>RQ8.1.2.8<br>RQ8.1.2.9<br>RQ8.1.2.12<br>RQ8.1.2.13<br>RQ8.1.2.14<br>RQ8.1.2.15<br><br>RQ8.1.3.6<br><br>RQ8.1.5.5<br>RQ8.1.5.14 |

| 5 | T → eUICC | Send VERIFY PIN pinAppl1 | |
| 6 | T → eUICC | Send AUTHENTICATE command with: P1 = '00' P2 = '81' Data = '10 42424242424242424242424242424242 10 608E0F8A8145 FFFF F9A54E6AEAA8618D'. See Note1 | |
| 7 | eUICC → T | AUTHENTICATE command returns with: Data = 'DB 04 657ACD64 10 D71A1E5C6CAFFE986A26F783E5C78BE1 10 BE849FA2564F869AECEE6F62D4337E72 08 EF56191F0B148D91'. SW = '9000'. See Note1 | |

Note1: the input and output of AUTHENTICATE command is derived from [TUAK TEST]

### 8.2.5    Check PIN and PUK codes

#### 8.2.5.1.    Installing PINs in enabled state

##### 8.2.5.1.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

##### 8.2.5.1.2. Initial conditions

None.

##### 8.2.5.1.3. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | |
| 2 | eUICC → T | eUICC responds with PEStatus (0) ok.<br>eUICC response contains no PE Identification. | RQ8.1.5.7<br>RQ8.1.5.14<br>RQ8.1.5.16<br><br>RQ8.1.11.9<br>RQ8.1.11.10 |
| 3 | T ↔ eUICC | Enable Profile Package according to 6.11. | |
| 4 | T → eUICC | Send the following commands to RFM USIM using SCP80:<br>SELECT FILE with Data = '3F00'<br>and<br>SELECT FILE with Data = '7FFF'. | RQ8.1.5.18 |
| 5 | eUICC → T | The second SELECT FILE command response contains an FCP with the PS_DO.<br>The value of the PS_DO (tag '90') shall indicate that adm1, PINAppl1 and secondPINAppl1 are enabled.<br>There shall be three key references:<br>'830101' and<br>'830181' and<br>'83010A'. | |

### 8.2.5.2. Installing PINs in disabled state

#### 8.2.5.2.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-2 | 6.14.4.2 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-3 | 6.14.8.3 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.5.2.2. Initial conditions

None.

#### 8.2.5.2.3. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | |
| 2 | eUICC → T | eUICC responds with PEStatus (0) ok.<br>eUICC response contains no PE Identification. | RQ8.1.5.7<br>RQ8.1.5.14<br>RQ8.1.5.16<br><br>RQ8.1.11.9<br>RQ8.1.11.10 |
| 3 | T ↔ eUICC | Enable Profile Package according to 6.11. | |
| 4 | T → eUICC | Send the following commands to RFM USIM using SCP80:<br>SELECT FILE with Data = '3F00'<br>and<br>SELECT FILE with Data = '7FFF'. | RQ8.1.5.18 |
| 5 | eUICC → T | The second SELECT FILE command response contains an FCP with the PS_DO.<br>The value of the PS_DO (tag '90') shall indicate that adm1 is enabled, PINAppl1 is disabled and secondPINAppl1 is disabled.<br>There shall be three key references:<br>'830101' and<br>'830181' and<br>'83010A' | |

### 8.2.6　Check Security Domains

#### 8.2.6.1.　Check mandatory elements in PE Security Domain

This test shall check all the mandatory objects.

##### 8.2.6.1.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

##### 8.2.6.1.2. Initial conditions

None.

##### 8.2.6.1.3. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | |
| 2 | eUICC → T | eUICC responds with PEStatus (0) ok.<br>eUICC response contains no PE Identification. | RQ8.1.6.1<br><br>RQ8.1.11.9<br>RQ8.1.11.10 |
| 3 | T ↔ eUICC | Enable Profile Package according to 6.11. | |
| 4 | T → eUICC | Send GET STATUS command to MNO-SD using SCP80　with<br>P1 = '80'<br>P2 = '02'<br>Data = '4F 00'. | RQ8.1.6.4<br>RQ8.1.6.5<br>RQ8.1.6.7 |
| 5 | eUICC → T | GET STATUS command responds with<br><ul><li>AID of MNO-SD (`#instanceAID`)</li><li>Life cycle state (`#lifeCyleState`)</li><li>Privileges (`#applicationPrivileges`)</li><li>SCP Registry Data is present</li><li>SW='9000'.</li></ul> | |

<u>Check key list in PE Security Domain</u>

This test shall check if the optional key list object is correctly processed.

### 8.2.6.2.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

### 8.2.6.2.2. Initial conditions

None

### 8.2.6.2.3. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.6.1 |
| 2 | eUICC → T | eUICC responds with PEStatus (0) ok.<br>eUICC response contains no PE Identification. | RQ8.1.11.9<br>RQ8.1.11.10 |
| 3 | T ↔ eUICC | Enable Profile Package according to 6.11. | |
| 4 | T → eUICC | Send GET DATA command to MNO-SD with<br>P1 = '00'<br>P2 = 'E0'. | RQ8.1.6.1<br>RQ8.1.6.2<br>RQ8.1.6.3<br>RQ8.1.6.4<br>RQ8.1.6.5<br>RQ8.1.6.8<br>RQ8.1.6.10<br>RQ8.1.6.11<br>RQ8.1.6.12<br>RQ8.1.6.12b<br>RQ8.1.6.13<br>RQ8.1.6.14<br>RQ8.1.6.15<br>RQ8.1.6.16<br>RQ8.1.6.17<br>RQ8.1.6.18<br>RQ8.1.6.26 |
| 5 | eUICC → T | GET DATA command responds with<br>• key information data containing `#keyIdentifier`, `#keyVersionNumber` and `#keyType`.<br>• SW='9000'. | |

| 6 | T → eUICC | Send GET_STATUS command using SCP80 to MNO-SD with<br>P1 = '80'<br>P2= '02'<br>Data = '4F 00'. | RQ8.1.6.4<br>RQ8.1.6.5<br>RQ8.1.6.7<br>RQ8.1.6.18<br>RQ8.1.6.34<br>RQ8.1.6.35<br>RQ8.1.6.37<br>RQ8.1.6.38a |
|---|---|---|---|
| 7 | eUICC → T | GET STATUS command responds with<br>• AID of MNO-SD (`#instanceAID`)<br>• Life cycle state (`#lifeCyleState`)<br>• Privileges (`#applicationPrivileges`)<br>• SCP Registry Data is present<br>• SW='9000'. | |

### 8.2.6.3. Check number of keyComponent objects

This test shall check if keyComponent is assigned just once per key.

#### 8.2.6.3.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-3 | 6.14.10.3 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.6.3.2. Initial conditions

None

#### 8.2.6.3.3. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according. To 6.10. | RQ8.1.6.27 |
| 2 | eUICC → T | eUICC response shall contain at least one PEStatus different from ok (0) and the identification of PE-SecurityDomain-MNO-SD-3. | |

### 8.2.6.4. Check sdPersoData

This test shall check if sdPersoData is processed.

#### 8.2.6.4.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-4 | 6.14.10.4 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.6.4.2. Initial conditions

None

#### 8.2.6.4.3. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.6.1 |
| 2 | eUICC → T | eUICC responds with PEStatus (0) ok.<br>eUICC response contains no PE Identification. | RQ8.1.11.9<br>RQ8.1.11.10 |
| 3 | T ↔ eUICC | Enable Profile Package according to 6.11. | |
| 4 | T → eUICC | Send GET DATA command to MNO-SD with<br>P1 = '00'<br>P2 = '42' (Issuer Identification Number). | RQ8.1.6.28<br>RQ8.1.6.29<br>RQ8.1.6.30<br>RQ8.1.6.31<br>RQ8.1.6.46 |
| 5 | eUICC → T | GET DATA command responds with<br>• IIN out of `#sdPersoData`.<br>• SW='9000'. | |
| 6 | T → eUICC | Send GET DATA command to MNO-SD with<br>P1 = '00'<br>P2 = '45' (Card Image Number). | RQ8.1.6.28<br>RQ8.1.6.29<br>RQ8.1.6.30<br>RQ8.1.6.31 |
| 7 | eUICC → T | GET DATA command responds with<br>• CIN out of #sdPersoData.<br>• SW='9000'. | |

<div align="center">

8.2.6.5. <u>Check OTA HTTPs Personalisation</u>
</div>

This test shall check if MNO_SD is personalised with OTA HTTPs Data.

<div align="center">

*8.2.6.5.1.Test execution*
</div>

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-5 | 6.14.10.5 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

<div align="center">

*8.2.6.5.2.Initial conditions*
</div>

None

<div align="center">

*8.2.6.5.3.Test procedure*
</div>

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.6.1 |
| 2 | eUICC → T | eUICC responds with PEStatus (0) ok.<br>eUICC response contains no PE Identification. | RQ8.1.11.9<br>RQ8.1.11.10 |
| 3 | T ↔ eUICC | Enable Profile Package according to 6.11. | |
| 4 | T → eUICC | Send GET DATA command to MNO-SD with<br>P1 = '00'<br>P2 = '85'. | RQ8.1.6.36a<br><br>RQ8.1.7.45 |
| 5 | eUICC → T | GET DATA command responds with<br>• Security Domain Administration Session Parameters contained in `#processData`.<br>• SW='9000'. | |

### 8.2.7　Check Application loading and installation

#### 8.2.7.1.　Check Application PE and mandatory elements in ApplicationInstance

##### 8.2.7.1.1.Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

##### 8.2.7.1.2.Initial conditions

None

##### 8.2.7.1.3.Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.1.6 RQ8.1.1.7 RQ8.1.1.9 RQ8.1.7.4 RQ8.1.7.5 RQ8.1.7.7 RQ8.1.7.8 RQ8.1.7.9 RQ8.1.7.20 RQ8.1.7.21 RQ8.1.7.22 RQ8.1.7.23 RQ8.1.7.24 RQ8.1.7.25 RQ8.1.7.26 RQ8.1.7.27 RQ8.1.7.30 RQ8.1.7.31 RQ8.1.7.32 RQ8.1.7.34a RQ8.1.7.35 RQ8.1.7.36 RQ8.1.7.39 RQ8.1.7.55 RQ8.1.7.69 |
| 2 | eUICC → T | eUICC responds with PEStatus (0) ok. eUICC response contains no PE Identification. | RQ8.1.11.9 RQ8.1.11.10 |
| 3 | T ↔ eUICC | Enable Profile Package (see description in 6.11). | |
| 4 | T → eUICC | Send GET STATUS command to MNO-SD using SCP80 with P1 = '40' P2 = '02' Data ='4F 0C #instanceAID'. | RQ8.1.6.7 |

sim alliance

| 5 | eUICC → T | GET STATUS command responds with<br>• AID of application (`#instanceAID`)<br>• Life cycle state ('07'H)<br>• Privileges (`#applicationPrivileges`)<br>• SCP Registry Data is present<br>• SW='9000'. | |
| 4 | T → eUICC | Send GET STATUS command to MNO-SD using SCP80 with<br>P1 = '20'<br>P2 = '02'<br>Data ='4F 08 #loadPackageAID'. | RQ8.1.7.62 |
| 5 | eUICC → T | GET STATUS command responds with<br>• Executable Load File AID (`#loadPackageAID`)<br>• Executable Load File Life Cycle State<br>• SW='9000'. | |

### 8.2.7.2. Check all elements in ApplicationLoadPackage – taking size into account – PE application is mandatory

#### 8.2.7.2.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-Application-2 | 6.14.12.2 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.7.2.2. Initial conditions

None

#### 8.2.7.2.3. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.7.8<br>RQ8.1.7.9<br>RQ8.1.7.10<br>RQ8.1.7.11<br>RQ8.1.7.12<br>RQ8.1.7.13<br>RQ8.1.7.14<br>RQ8.1.7.15<br>RQ8.1.7.16<br>RQ8.1.7.17<br>RQ8.1.7.18<br>RQ8.1.7.19<br>RQ8.1.7.20<br>RQ8.1.7.21 |

sim alliance

| 2 | eUICC → T | If O_MEMORY_LIMIT , the eUICC responds with PEStatus (4) not-enough-memory and the identification of PE-Application-2, or with PEStatus different from (0) and identification of PE-Application-2.<br>the last eUICC response contains profileInstallationAborted object.<br><br>If not O_MEMORY_LIMIT, the eUICC responds with PEStatus (0) ok and no identification , or with PEStatus different from (0) and the identification of PE-Application-2. | RQ8.1.11.2<br>RQ8.1.11.2a<br>RQ8.1.11.15<br>RQ8.1.11.15b<br>RQ8.1.11.15c<br>RQ8.1.11.25<br><br>RQ8.1.11.9<br>RQ8.1.11.17<br>RQ8.1.11.17b |
|---|---|---|---|
| 3 | T ↔ eUICC | If O_MEMORY_LIMIT enabling the Profile Package according to 6.11 fail.<br>If not O_MEMORY_LIMIT the result of enabling the Profile Package according to 6.11 is unspecified. | |

### 8.2.7.3. Check all elements in ApplicationInstance

#### 8.2.7.3.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-3 | 6.14.12.3 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.7.3.2. Initial conditions

None

#### 8.2.7.3.3. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.7.4<br>RQ8.1.7.5<br>RQ8.1.7.22<br>RQ8.1.7.23<br>RQ8.1.7.24<br>RQ8.1.7.25<br>RQ8.1.7.26<br>RQ8.1.7.27<br>RQ8.1.7.28<br>RQ8.1.7.29<br>RQ8.1.7.31<br>RQ8.1.7.32<br>RQ8.1.7.34b<br>RQ8.1.7.35<br>RQ8.1.7.36<br>RQ8.1.7.38<br>RQ8.1.7.39<br>RQ8.1.7.40<br>RQ8.1.7.41 |

| 3 | T ↔ eUICC | Enable Profile Package (see description in 6.11). | |
| 4 | T → eUICC | Send GET STATUS command to SSD using SCP80 with<br>P1 = '40'<br>P2 = '02'<br>Data ='4F 10 #instanceAID'. | RQ8.1.6.7 |
| 5 | eUICC → T | GET STATUS command responds with<br><ul><li>AID of application (#instanceAID)</li><li>Life cycle state (#lifeCycleState)</li><li>Privileges (#applicationPrivileges)</li><li>SCP Registry Data is present</li><li>SW='9000'.</li></ul> | |

### 8.2.7.4. <u>Error when loading an Application PE and bad library is provided</u>

#### 8.2.7.4.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-Application-4 | 6.14.12.4 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.7.4.2. Initial conditions

None

#### 8.2.7.4.3. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.1.6<br>RQ8.1.1.7<br>RQ8.1.1.9<br><br>RQ8.1.7.1<br>RQ8.1.7.7<br>RQ8.1.7.8<br>RQ8.1.7.9 |

sim alliance

| 2 | eUICC → T | eUICC response with PEStatus (8) lib-not-supported and the identification of PE-Application-4, or with PEStatus different from (0) and identification of PE-Application-4. the last eUICC response contains profileInstallationAborted object. | RQ8.1.11.2 RQ8.1.11.2a RQ8.1.11.19 RQ8.1.11.19a RQ8.1.11.25 |
| 3 | T ↔ eUICC | Enabling Profile Package according to 6.11 fail. | |

### 8.2.7.5. Check multiple ApplicationInstance

#### 8.2.7.5.1. Test execution

This test is executed only if multiple instances are supported

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-Application-5 | 6.14.12.5 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.7.5.2. Initial conditions

None

#### 8.2.7.5.3. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.1.6 RQ8.1.1.7 RQ8.1.1.9 <br><br> RQ8.1.7.3 RQ8.1.7.7 RQ8.1.7.8 RQ8.1.7.9 RQ8.1.7.20 RQ8.1.7.21 RQ8.1.7.22 RQ8.1.7.23 RQ8.1.7.24 RQ8.1.7.25 RQ8.1.7.26 RQ8.1.7.27 RQ8.1.7.30 RQ8.1.7.31 RQ8.1.7.32 RQ8.1.7.35 RQ8.1.7.36 |
| 2 | eUICC → T | eUICC response with PEStatus (0) ok. eUICC response contains no PE Identification. | RQ8.1.11.9 RQ8.1.11.10 |

| 3 | T → eUICC | Enable Profile Package (see description in 6.11). | |
| 4 | T → eUICC | Send GET STATUS command to MNO-SD using SCP80 with<br>P1 = '40'<br>P2 = '02'<br>Data ='4F 0C #instanceAID' (first application). | RQ8.1.6.7 |
| 5 | eUICC → T | GET STATUS command responds with<br>• AID of the First Instance of application (#instanceAID)<br>• Life cycle state ('07'H )<br>• Privileges (#applicationPrivileges)<br>• SCP Registry Data is present<br>• SW='9000'. | |
| 6 | T → eUICC | Send GET STATUS command to MNO-SD using SCP80 with<br>P1 = '40'<br>P2 = '02'<br>Data ='4F 0C #instanceAID' (second application). | RQ8.1.6.7<br><br>RQ8.1.7.3 |
| 7 | eUICC → T | GET STATUS command responds with<br>• AID of the Second Instance of application (#instanceAID)<br>• Life cycle state ('07'H )<br>• Privileges (#applicationPrivileges)<br>• SCP Registry Data is present<br>• SW='9000'. | |

### 8.2.7.6.      Check processData

#### 8.2.7.6.1.Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-Application-6 | 6.14.12.6 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.7.6.2.Initial conditions

None

*8.2.7.6.3.* Test procedure

| Step | Direction | Description | RQ |
|------|-----------|-------------|-----|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.1.6<br>RQ8.1.1.7<br>RQ8.1.1.9<br><br>RQ8.1.7.6<br>RQ8.1.7.8<br>RQ8.1.7.9<br>RQ8.1.7.20<br>RQ8.1.7.21<br>RQ8.1.7.22<br>RQ8.1.7.23<br>RQ8.1.7.24<br>RQ8.1.7.25<br>RQ8.1.7.26<br>RQ8.1.7.27<br>RQ8.1.7.30<br>RQ8.1.7.31<br>RQ8.1.7.32<br>RQ8.1.7.34a<br>RQ8.1.7.35<br>RQ8.1.7.36<br>RQ8.1.7.39<br>RQ8.1.7.40<br>RQ8.1.7.41<br>RQ8.1.7.42<br>RQ8.1.7.43<br>RQ8.1.7.44<br>RQ8.1.7.45<br>RQ8.1.7.46<br>RQ8.1.7.55<br>RQ8.1.7.60 |

| 3 | T → eUICC | Enable Profile Package (see description in 6.11). | |
| 4 | T → eUICC | Send GET STATUS command to MNO-SD using SCP80 with<br>P1 = '40'<br>P2 = '02'<br>Data ='4F 0C #instanceAID'. | RQ8.1.6.7 |
| 5 | eUICC → T | GET STATUS command responds with<br>• AID of application1 (#instanceAID)<br>• Life cycle state ('07'H )<br>• Privileges (#applicationPrivileges)<br>• SCP Registry Data is present<br>• SW='9000'. | |
| 6 | T → eUICC | Send GET DATA command to TAR Application 6 using SCP80 with<br>P1 = '00'<br>P2 = '92'<br>Lc = '00'<br>Le = '00'. | |
| 7 | eUICC → T | GET DATA command responds with<br>• #processData information. | |

### 8.2.7.7. Error when loading Application PE and the lifecycle of SD is not PERSONALISED

#### 8.2.7.7.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-2 | 6.14.11.2 |
| PE-Application-3 | 6.14.12.3 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.7.7.1. Initial conditions

None

#### 8.2.7.7.2. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.7.69b |
| 2 | eUICC → T | eUICC response with PEStatus (6) invalid-parameter and the identification of PE-Application-3.<br>the last eUICC response contains profileInstallationAborted object. | RQ8.1.11.2<br>RQ8.1.11.2a<br>RQ8.1.11.17d<br>RQ8.1.11.25 |
| 3 | T ↔ eUICC | Enabling Profile Package according to 6.11 fail. | |

8.2.7.8.    Check all elements in ApplicationLoadPackage – taking size into account – PE application is not mandatory

*8.2.7.8.1. Test execution*

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-Application-7 | 6.14.12.7 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

*8.2.7.8.1. Initial conditions*

None

*8.2.7.8.2. Test procedure*

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.7.8<br>RQ8.1.7.9<br>RQ8.1.7.10<br>RQ8.1.7.11<br>RQ8.1.7.12<br>RQ8.1.7.13<br>RQ8.1.7.14<br>RQ8.1.7.15<br>RQ8.1.7.16<br>RQ8.1.7.17<br>RQ8.1.7.18<br>RQ8.1.7.19<br>RQ8.1.7.20<br>RQ8.1.7.21 |
| 2 | eUICC → T | If O_MEMORY_LIMIT , the eUICC responds with PEStatus (4) not-enough-memory and the identification of PE-Application-7, or with PEStatus different from (0) and identification of PE-Application-7.<br>the last eUICC response contains profileInstallationAborted object.<br><br>If not O_MEMORY_LIMIT, the eUICC responds with PEStatus (0) ok and no identification , or with PEStatus different from (0) and the identification of PE-Application-7. | RQ8.1.11.2<br>RQ8.1.11.2a<br>RQ8.1.11.15<br>RQ8.1.11.15c<br>RQ8.1.11.25<br><br>RQ8.1.11.9<br>RQ8.1.11.17 |
| 3 | T ↔ eUICC | If O_MEMORY_LIMIT enabling the Profile Package according to 6.11 fail.<br>If not O_MEMORY_LIMIT the result of enabling the Profile Package according to 6.11 is unspecified. | |

### 8.2.7.9.    Check all elements in ApplicationInstance when eUICC supports tag list '5C' with tag 'CF'

#### 8.2.7.9.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-3 | 6.14.12.3 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.7.9.2. Initial conditions

None

#### 8.2.7.9.3. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.7.4<br>RQ8.1.7.5<br>RQ8.1.7.22<br>RQ8.1.7.23<br>RQ8.1.7.24<br>RQ8.1.7.25<br>RQ8.1.7.26<br>RQ8.1.7.27<br>RQ8.1.7.28<br>RQ8.1.7.29<br>RQ8.1.7.31<br>RQ8.1.7.32<br>RQ8.1.7.34b<br>RQ8.1.7.35<br>RQ8.1.7.36<br>RQ8.1.7.37<br>RQ8.1.7.38<br>RQ8.1.7.39<br>RQ8.1.7.40<br>RQ8.1.7.41<br>RQ8.1.7.42<br>RQ8.1.7.47<br>RQ8.1.7.48<br>RQ8.1.7.50<br>RQ8.1.7.51<br>RQ8.1.7.52<br>RQ8.1.7.55<br>RQ8.1.7.58 |
| 2 | eUICC → T | eUICC responds with PEStatus (0) ok.<br>eUICC response contains no PE Identification. | RQ8.1.11.9<br>RQ8.1.11.10 |
| 3 | T ↔ eUICC | Enable Profile Package (see description in 6.11). | |
| 4 | T → eUICC | Send GET STATUS command to SSD using SCP80  with<br>P1 = '40'<br>P2 = '02'<br>Data ='4F 10 #instanceAID 5C 05 4F 9F70 C5 CF' | RQ8.1.6.7 |

| 5 | eUICC → T | GET STATUS command responds with <br>• AID of application (#instanceAID) <br>• Life cycle state (#lifeCycleState) <br>• Privileges (#applicationPrivileges) <br>• SCP Registry Data is present See Note <br>• Implicit Selection Parameter (#implicitSelectionParameter) <br>• SW='9000'. | |

Note: SCP Registry Data may not be present in the response

### 8.2.8     Check RFM parameters

#### 8.2.8.1.     Installing PE-RFM with adfRFMAccess

##### 8.2.8.1.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

##### 8.2.8.1.2. Initial conditions

None.

##### 8.2.8.1.3. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | |
| 2 | eUICC → T | eUICC responds with PEStatus (0) ok. <br>eUICC response contains no PE Identification. | RQ8.1.11.9 <br>RQ8.1.11.10 |
| 3 | T ↔ eUICC | Enable Profile Package according to 6.11. | |
| 4 | T → eUICC | Send SELECT by FILE ID command to the RFM instance using SCP80 with <br>Data = '2F00'. | |
| 5 | eUICC → T | SELECT command fails with an error SW '6A 82' - File not found | RQ8.1.8.18 |
| 6 | T → eUICC | Send SELECT by FILE ID command with Data = '6F07' <br>and READ BINARY with Length = 9 <br>to the RFM instance using SCP80 | |

| 7 | eUICC → T | SELECT by FILE ID and READ BINARY commands succeed (SW '90 00') | RQ8.1.8.18 |

### 8.2.8.2. Installing PE-RFM without adfRFMAccess

#### 8.2.8.2.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-2 | 6.14.13.2 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.8.2.2. Initial conditions

None.

#### 8.2.8.2.3. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | |
| 2 | eUICC → T | eUICC responds with PEStatus (0) ok.<br>eUICC response contains no PE Identification. | RQ8.1.11.9<br>RQ8.1.11.10 |
| 3 | T ↔ eUICC | Enable Profile Package according to 6.11. | |
| 4 | T → eUICC | Send SELECT by FILE ID command to the RFM instance using SCP80  with<br>Data = '6F07'. | |
| 5 | eUICC → T | SELECT command fails with error SW '6A 82' - File not found ,or SW '69 85' – Condition of use is not satisfied. | RQ8.1.8.17 |
| 6 | T → eUICC | Send SELECT by FILE ID command to the RFM instance using SCP80  with<br>Data = '2F00'. | |
| 7 | eUICC → T | SELECT command succeeds (SW '90 00') | RQ8.1.8.19 |

### 8.2.8.3. Installing profile with two difference PE-RFMs

#### 8.2.8.3.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-1 | 6.14.1.1 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-SecurityDomain-SSD-1 | 6.14.11.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-RFM-2 | 6.14.13.2 |
| PE-END-1 | 6.14.14.1 |

#### 8.2.8.3.2. Initial conditions

None.

#### 8.2.8.3.3. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | |
| 2 | eUICC → T | eUICC responds with PEStatus (0) ok.<br>eUICC response contains no PE Identification. | RQ8.1.11.9<br>RQ8.1.11.10 |
| 3 | T ↔ eUICC | Enable Profile Package according to 6.11. | |
| 4 | T → eUICC | Send SELECT by FILE ID command to the RFM instance_1 (TAR value is B00000) using SCP80 with Data = '6F07'. | RQ8.1.8.4 |
| 5 | eUICC → T | SELECT command succeeds (SW '90 00') | RQ8.1.8.2 |
| 6 | T → eUICC | Send SELECT by FILE ID command to the RFM instance_2 (TAR value is B00002) using SCP80 with Data = '2F00'. | RQ8.1.8.4 |
| 7 | eUICC → T | SELECT command succeeds (SW '90 00') | RQ8.1.8.2 |

### 8.2.9 Check Non standardized content
Note:_Testing the requirements for the PEs with non standardized content is out of scope of this document.

### 8.2.10 Check Profile Package end
Requirements related to Profile Package end are tested in 8.2.3.

### 8.2.11    Check eUICC Response

#### 8.2.11.1.    Check unsupported major version

##### 8.2.11.1.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-3 | 6.14.1.3 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |
| PE-AKAParameters-1 | 6.14.9.1 |
| PE-SecurityDomain-MNO-SD-1 | 6.14.10.1 |
| PE-Application-1 | 6.14.12.1 |
| PE-RFM-1 | 6.14.13.1 |
| PE-END-1 | 6.14.14.1 |

##### 8.2.11.1.1. Initial conditions

None

##### 8.2.11.1.2. Test procedure

| Step | Direction | Description | RQ |
|---|---|---|---|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.2.5 |
| 2 | eUICC → T | eUICC response with PEStatus (31) unsupported-profile-version<br>eUICC response contains no identification object<br>eUICC response contains profileInstallationAborted object. | RQ8.1.11.23<br>RQ8.1.11.23a |
| 3 | T ↔ eUICC | Enabling Profile Package according to 6.11 fail. | |

#### 8.2.11.2.    Check unsupported template in Profile Header

##### 8.2.11.2.1. Test execution

The Profile Package is defined as follows:

| Test PE name | Reference |
|---|---|
| Profile-Header-4 | 6.14.1.4 |
| MF-by-Generic-File-Management-1 | 6.14.2.1.2 |
| PE-PUKCodes-1 | 6.14.3.1 |
| PE-PINCodes-1 | 6.14.4.1 |
| USIM-by-Generic-File-Management-1 | 6.14.5.1.2 |
| PE-PINCodes-Local-PIN-1 | 6.14.8.1 |

##### 8.2.11.2.2. Initial conditions

None

| Step | Direction | Description | RQ |
|------|-----------|-------------|-----|
| 1 | T → eUICC | Load Profile Package to the eUICC according to 6.10. | RQ8.1.2.19 |
| 2 | eUICC → T | eUICC response with PEStatus (9) template-not-supported, or with PEStatus different from (0).<br>eUICC response contains no identification object.<br>eUICC response contains profileInstallationAborted object. | RQ8.1.11.20<br>RQ8.1.11.20b |
| 3 | T ↔ eUICC | Enabling Profile Package according to 6.11 fail. | |

simalliance

# 9. ANNEX A (Informative) : Java files

SIMalliance provides the .java and .cap files which are used in the PE Applications defined in this specification. These files will be available for download on SIMalliance website.

The .cap files are compiled to the APIs based on the versions of the following specifications:

-ETSI TS 102241 v6.12.0

-3GPP 31.130 v6.4.1

-Java Card API and Java Card Export File v1.2 for GlobalPlatform Card Specification v2.2

# 10. ANNEX B (Informative) : Document history

The table below indicates changes that have been incorporated into the present document since it was created by SIMalliance.

| Version | Date | Brief Description of Change |
|---|---|---|
| V1.0. | 14/04/2016 | 1st Release of Document |
| V2.0. | 06/07/2016 | -Test PE-s are updated in Ch 6.12 to align to eUICC Profile Package: Interoperable Format Technical Specification v2.0; also new Test PE-s are added.<br>-RQs are updated in Ch 7.1 and 8.1 to align to eUICC Profile Package: Interoperable Format Technical Specification v2.0; also new RQs are added.<br>-Test cases are updated, especially new Test PE-s are referenced.<br>-New test cases are added: 8.2.1.1; 8.2.1.8; 8.2.3.6.<br>-References are updated, applicability table and related chapters are updated, Ch 6.7 is updated. |
| V2.1 | 17/05/2017 | Major changes:<br>-in Chapter 6.6 the General Initial Conditions are updated<br>-Chapter 6.8 (Indications concerning support of features) is deleted<br>-Chapter 6.14 Test PE description (Ch 6.12 in v2.0) is restructured and updated<br>-in Chapter 7.1 and 8.1 the Test Requirements are updated to align to Technical Specification v2.1<br>-Chapter 8.2 is restructured<br>-the following new TC-es are added:<br>8.2.3.3.Installing USIM files by template with OPT-USIM-2<br>8.2.3.4. Installing USIM files by template with BER-TLV files in ServicesList.<br>8.2.3.5. Error when installing PE-USIM when eUICC does not support USIM.<br>8.2.3.6 Warning when installing USIM files by template with BER-TLV files in a non mandatory PE when eUICC does not support BER-TLV.<br>8.2.3.7. Warning when creating a DF with dfLink in a non mandatory PE when eUICC does not support dfLink.<br>8.2.3.8. Creating a DF with dfLink when eUICC supports dfLink is added<br>8.2.3.9. Creating a DF with dfLink when eUICC supports dfLink and dfLink in ServicesList is added<br>8.2.3.10. Installing CSIM files by template is added |

| | | 8.2.3.11. Installing ISIM files by template is added<br>8.2.4.1. Installing PE-AKAParameters with MILENAGE and sending AUTHENTICATE is added<br>8.2.4.2. Installing PE-AKAParameters with TUAK and sending AUTHENTICATE is added<br>8.2.5.1 Installing PINs in enabled state.<br>8.2.5.2 Installing PINs in disabled state.<br>8.2.7.7 Error when loading Application PE and the lifecycle of SD is not personalised<br>8.2.7.8 Check all elements in ApplicationLoadPackage – taking size into account – PE application is not mandatory<br>8.2.7.9 Check all elements in ApplicationInstance when eUICC supports tag list '5C' is added<br>8.2.8.1 Installing PE-RFM with adfRFMAccess.<br>8.2.8.2 Installing PE-RFM without adfRFMAccess.<br>8.2.11.1 Check unsupported major version.<br>8.2.11.2 Check unsupported template.<br>-several TC-es are updated<br>-TC 8.2.1.4 Installing profile without ProfileHeader PE is deleted<br>-new Test PE-s are defined in Chapter 6.14<br>-several Test PE-s are updated and renamed, one Test PE is deleted<br>-DER codes are deleted from the Test PE descriptions<br>-Annex A added |
